# Introduction to Algebraic and Constructive Quantum Field Theory

*John C. Baez, Irving E. Segal, and Zhengfang Zhou*

The authors present a rigorous treatment of the first principles of the algebraic and analytic core of quantum field theory. Their aim is to correlate modern mathematical theory with the explanation of the observed process of particle production and of particle-wave duality that heuristic quantum field theory provides. Many topics are treated here in book form for the first time, from the origins of complex structures to the quantization of tachyons and domains of dependence for quantized wave equations.

*Princeton Series in Physics; Philip W. Anderson, Arthur S. Wightman, and Sam B. Treiman, Editors*

# Springer isn't Springer

## Do you know the difference?

There are two publishing companies which have nothing in common except the name "Springer". Nevertheless, they are often confused with each other.

Springer-Verlag Berlin Heidelberg New York London Paris Tokyo Hong Kong Barcelona Budapest was founded in 1842. We specialize in the publication of scientific books and journals.

The other one, Axel Springer AG, was founded in 1947 and publishes daily newspapers and magazines. There is absolutely no family or financial connection between the two.

Springer-Verlag

Berlin Heidelberg New York London Paris Tokyo Hong Kong Barcelona Budapest

Heidelberger Platz 3, D-1000 Berlin 33 · 175 Fifth Ave., New York, NY 10010, USA · 8 Alexandra Rd., London SW19 7JZ, England · 26, rue des Carmes, F-75005 Paris · 37-3, Hongo 3-chome, Bunkyo-ku, Tokyo 113, Japan · Citycorp Centre, Room 1603, 18 Whitfield Road, Causeway Bay, Hong Kong · Avinguda Diagonal, 468-4° C, E-08006 Barcelona · Weselényi u. 20, H-1075 Budapest, Hungary

**F. Durst, B. E. Launder, W. C. Reynolds, F. W. Schmidt, J. H. Whitelaw** (Eds.)

## *Volume 7*

Selected Papers from the Seventh International Symposium on Turbulent Shear Flows, Stanford University, USA, August 21–23, 1989

1991. IX, 379 pp. 241 figs. Hardcover DM 198,-
ISBN 3-540-53177-7

The book contains four parts on scalar and stratified flows, wall flows, free shear flows, and reacting flows. A carefully refereed selection of papers of lasting value gives an overview of the present status of turbulent shear flow research, including both theoretical and experimental work. The section on reacting flows emphasizes research on combustion problems. The book is an important reference for researchers and engineers.

**J.-C. André, J. Cousteix, F. Durst, B. E. Launder, F. W. Schmidt, J. H. Whitelaw** (Eds.)

## *Volume 6*

Selected Papers from the Sixth International Symposium on Turbulent Shear Flows, Université Paul Sabatier, Toulouse, France, September 7–9, 1987

1988. IX, 455 pp. 328 figs. Hardcover DM 70,-
ISBN 3-540-50102-9

**F. Durst, B. E. Launder, J. L. Lumley, F. W. Schmidt, J. H. Whitelaw** (Eds.)

## *Volume 5*

Selected Papers from the Fifth International Symposium on Turbulent Shear Flows, Cornell University, Ithaca, NY, USA, August 7–9, 1985

1987. VIII, 372 pp. 260 figs. Hardcover DM 114,-

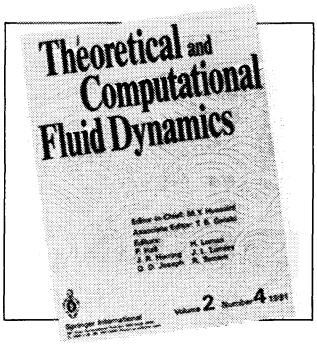
**Understanding complex physical phenomena**



# Theoretical and Computational Fluid Dynamics

## *Take a look at some forthcoming articles:*

**On the receptivity and non-parallel stability of travelling disturbances in rotating disk flow.** *P. Balakumar, P. Hall, M. R. Malik*

**Analysis of the linear stability of compressible boundary layers using the PSE.** *F. P. Bertolotti, T. Herbert*

**Near wall turbulence closure modelling without 'Damping Functions'.** *P. A. Durbin*

**Complex transition to chaotic flow in a periodic array of cylinders.** *A. Fortin, M. Fortin, J. J. Gervais*

**Numerical simulation of three-dimensional unsteady viscous flow past finite cylinders in an unbounded fluid at low intermediate Reynolds numbers.** *W. Ji, P. K. Wang*

**Turbulence-driven secondary flows in a curved pipe.** *Y. G. Lai, R. M. C. So, H. S. Zhang*

**Stability of a non-orthogonal stagnation flow to three dimensional disturbances.** *D. G. Lasseigne, T. L. Jackson*

**Multiple bifurcation of rotating pipe flow.** *A. Mahalov, S. Leibovich*

**Direct and large-eddy simulations of transition in the compressible boundary layer.** *X. Normand, M. Lesieur*

**The route to chaos for the Kuramoto-Sivashinsky equation.** *D. T. Papageorgiuo, Y. S. Smyrlis*

**Numerical simulation of shear-thinning flow problems in mixing vessels.** *L. Rubart, G. Böhme*

**Secondary cells and separation in developing laminar curved-pipe flows.** *R. M. C. So, H. S. Zhang, Y. G. Lai*

**Remark on the pressure boundary condition for the projection method.** *R. Temam*

**Theoretical and Computational Fluid Dynamics** provides a timely forum for rigorous mathematical and asymptotic analyses and for thorough computational investigations that advance the state of knowledge in basic fluid dynamics. Aimed at the growing communities of research in both theoretical and computational fluid dynamics, this journal fosters a strong interaction between these approaches.

**Theoretical and Computational Fluid Dynamics** covers all areas of fluid mechanics: transition and turbulence, hydrodynamic stability, convection, geophysical fluid dynamics, gas dynamics, and non-Newtonian flows. The journal features articles that combine computational and experimental approaches to gain insight into complex flow physics.

Including a wide array of scholarly research papers, invited review articles, brief communications, and letters commenting on previously published papers, **Theoretical and Computational Fluid Dynamics** will be of interest to researchers in mechanical and aerospace engineering, flow physics, and fluid dynamics.
