Springer L^AT_EX and plain-T_EX macros

We can use your T_EX files directly for phototypesetting if you have used our macros. Makropackages are available for the following journals:

LJour1 L^AT_EX styles for Acta Informatica, Applicable Algebra in Engineering, Communication and Computing, Archive for Mathematical Logic, Astronomy & Astrophysics Reviews, Calculus of Variations, Communications in Mathematical Physics, Continuum Mechanics and Thermodynamics, Economic Theory, Inventiones mathematicae, Journal of Evolutionary Economics, Journal of Mathematical Biology, Manuscripta mathematica, Mathematische Annalen, Mathematische Semesterberichte, Mathematische Zeitschrift, Numerische Mathematik, Probability Theory and Related Fields, Statistical papers, Theoretica Chimica Acta

PJour1g global plain T_EX packages for all journals mentioned above; ***PJour 1*** may also still be used. All packages are available via mailserver, FTP server or on DOS diskettes.

Mailserver

Send an e-mail message to svserv@vax.ntp.springer.de which must contain one (several) of the following commands:

LJour1 `get /tex/latex/ljour1.zip`
PJour1g `get /tex/plain/pjour1g.zip`

In order to be transmitted ungarbled via the net, the files are pkzipped and unencoded. The line `get /tex/help-tex.txt` in your e-mail to svserv will send you a file explaining how to unpack the files you receive. Please do not send regular e-mail to this address.

FTP server

The internet address is 192.129.24.12 (trick.ntp.springer.de) The username is FTP or ANONYMOUS and the files are in the directory `/pub/tex`

Diskettes

To get the macro files and the AMS fonts (when needed) on 3.5" DOS diskettes please write to:

Springer-Verlag, Journal Production,
Tiergartenstr. 17
D-69121 Heidelberg, Germany
e-mail: springer@vax.ntp.springer.de
FAX number: x 49 6221 487625

Please indicate clearly which macro package you need and the journal for which your paper is intended.

Use our L^AT_EX and plain-T_EX macros to prepare your article for this and for other Springer journals.

A self-contained introduction

Springer Series in
Solid-State Sciences 104

A. Crisanti G. Paladin A. Vulpiani

Products of Random Matrices

In Statistical Physics

Springer-Verlag

A. Crisanti, G. Paladin, A. Vulpiani

Products of Random Matrices in Statistical Physics

1993. Approx. 170 pp. 39 figs.
(Springer Series in Solid-State Sciences,
Vol. 104) Hardcover DM 98,-
ISBN 3-540-56575-2

This book is devoted to the theory and applications of products of random matrices, which arise naturally in many different fields. It describes analytic and numerical methods for the calculation of the corresponding Lyapunov exponents, which can be used as a tool for the analysis of problems in, for example, statistical mechanics of disordered systems, localization, wave propagation in random media, and chaotic dynamical systems. This book provides an excellent self-contained introduction to the subject for physicists working in condensed-matter and statistical physics.

Unique Guides

S. Brandt, H.D. Dahmen,
University of Siegen

Quantum Mechanics on the Personal Computer

2nd ed. 1992. XII, 267 pp. 69 figs. 284 exercises.
Incl. a diskette version 1.2 (3 1/2" MS-DOS)
Hardcover DM 102,- ISBN 3-540-55722-9

Quantum Mechanics on the Macintosh®

1991. X, 306 pp. 69 figs. 284 exercises. (incl. two 3 1/2" program diskettes)
Hardcover DM 102,- ISBN 3-540-97627-2

Based on the interactive program Interquanta, **Quantum Mechanics on the Personal Computer** and **Quantum Mechanics on the Macintosh** use extensive 3-D graphics to guide the student through computer experiments in the quantum mechanics of free particle motion, bound states and scattering, tunneling, two-particle interactions, and more. They also include sections on special functions of mathematical physics.

With more than 250 exercises, the texts and programs provide students with practical experience in using such hard-to-visualize concepts as complex amplitudes, eigenvalues, and scattering cross sections. The diskettes included with the books provide two versions of the programs, one for use in computers with a mathematical coprocessor, the other optimized for machines without a coprocessor.
