

PREFACE

The Journal of Geometry and Symmetry in Physics (JGSP) is a new international journal in mathematical physics.

The journal aims to provide a forum for discussing seminal ideas in depth, and for exchanging information on mathematical techniques and physical results. It will publish original, high quality research articles and, through invited reviews, will provide readers with background information and reference sources. The journal will also publish extended versions of talks presented at international conferences related to the geometry of classical and quantum systems, such as the meeting on Geometry, Integrability and Quantization held annually in Bulgaria. It will include book reviews, telegraphic reviews, and announcements of relevant conferences.

The high standards of the journal will be maintained by its international Editorial Board. All articles will be refereed by leading authorities in the appropriate fields. The Editorial Board requests all authors wishing to publish in JGSP to send papers for consideration to one of the Associate Editors at the address listed, whose area of expertise encompasses the research topic and with whom the author can communicate effectively. Alternatively, submissions may be sent directly to the JGSP Editorial Office address.

Please inform your librarian about this journal, and urge that JGSP be added to your institution's subscription list.
