FRED SEDDON, *Aristotle and Łukasiewicz on the
Principle of Contradiction*

(With a biographical sketch of Jan Łukasiewicz by Jan Woleński)

ISBN 1-884905-04-8 (paperback) ; Price: \$ 27.95

Fred SEDDON taught philosophy at Wheeling Jesuit College and was president of the West Virginia Philosophical Association. He is the author of *An Introduction to the Philosophical Works of F. C. S. Northrop*, published by Edwin Mellen Press in 1995.

The author presents a section-by-section evaluation of Łukasiewicz’s analysis of Aristotle’s treatment of the Principle of Contradiction, as this was presented in Wedin’s English translation of Łukasiewicz’s famed article “Über den Satz der Widerspruchs bei Aristoteles.”

“The author’s task is to analyze the principle of contradiction in Aristotle through the glasses of Jan Łukasiewicz. The book makes several interesting points. In particular, the author compares various views on the topic being analyzed as well as various translations of Aristotle’s related writings. Perhaps the most interesting fragment concerns Łukasiewicz’s criticism of Aristotle’s proofs. The author correctly points out that Łukasiewicz confuses here two meanings of “proof”, and that his criticism of the Stagirite’s arguments for the principle of contradiction is unjustified. . . . Also one must agree with the author’s criticism of Łukasiewicz’s view that the principle of contradiction is psychological rather than logical.”

— Jan Woleński (Jagiellonian University)

*Secondary Studies in the Nineteenth-century History of
Algebraic Logic and Universal Algebra:
An Electronic Bibliography*

AN INDISPENSIBLE RESEARCH TOOL. Up-to-date through its publication date of January 1995, this bibliography, compiled over five years by members of the editorial board of *Modern Logic* with the assistance of specialists in the history of algebraic logic, provides information on bibliographies and approximately 1400 nineteenth- and twentieth-century expository and secondary literature on the history of algebraic logic and universal algebra, covering the earliest developments of the "symbolical algebra" of the the British Analyst school of the 1820s through the 1920s. Inaccessible and little-known studies by major and minor figures are listed alongside of well-known studies by historians of logic as well as by original contributors to the algebraic tradition and cover all aspects of the history of algebraic logic and universal algebra, including considerations of the influences and interactions between the algebraic and function-theoretic traditions. The bibliography may be searched by author, AMS (MOS) subject classifications, and by key words.
