13 ways to simplify statistics—from Van Nostrand Reinhold

New!

1. NUMERICAL METHODS IN ENGINEERING AND SCIENCE

By Carl E. Pearson, University of Washington

Provides a convenient, self-contained text/reference on numerical analysis—the widely used method of obtaining approximation for solutions of mathematical problems. *256 pages, 6 x 9, 53 illustrations, $29.50*

2. COMPUTER-AIDED MULTIVARIATE ANALYSIS

By Abdelmonem Afifi, Ph.D., and Virginia A. Clark, Ph.D., both at University of California, Los Angeles

Helps researchers fully understand the results of multivariate analysis. Covers data, entry, screening, reduction, analysis, and more. *360 pages, 6½ x 9¼, $34.95*

3. ANALYSIS OF MESSY DATA, VOLUME I— DESIGNED EXPERIMENTS

By George A. Milliken, Ph.D., and Dallas E. Johnson, Ph.D., both at Kansas State University

Presents statistical methods and techniques for analyzing non-standard or messy data sets (missing observations, outliers, or failure of assumptions). *600 pages, 6½ x 9¼, $47.95*

Forthcoming: ANALYSIS OF MESSY DATA, VOLUME II—COVARIANCE ANALYSIS

4. INTRODUCTION TO FUZZY ARITHMETIC

By Arnold Kaufman, formerly of the University of Louvain, and Madan Gupta, University of Saskatchewan

Introduces an arithmetical system for working with information that is imprecise, vague, ill-defined, and doubtful—in short, 'fuzzy.' *320 pages, 6 x 9, $44.95*

5. HANDBOOK OF MATHEMATICS Twentieth Edition

By I.N. Bronshtein and K.A. Semendyayev

Here, in one convenient volume, are all of the definitions, theorems, formulas, results, and tables most likely to be used by students and research workers in math, engineering, physics, and other sciences. *1,100 pages, 5⅝ x 8⅛, flexible plastic cover, $37.95*

6. STATISTICAL METHODS FOR SURVIVAL DATA ANALYSIS

By Elisa T. Lee, Ph.D., University of Oklahoma Health Services Center

Relying on computer programs for computation, this guide covers probability plotting, hazard plotting, clinical trials, and risk factors and features real medical data in examples and exercises. *557 pages, 6½ x 9¼, $37.00, Solutions Manual $5.95*

7. THE VNR CONCISE ENCYCLOPEDIA OF MATHEMATICS

Edited by W. Gellert, H. Kustner, M. Hellwich, and H. Kastner

Emphasizing applications in science and technology, this guide covers everything from arithmetic, algebra, and geometry to set theory, mathematical logic, the axiomatic foundation of mathematics, and more. *810 pages, 6⅞ x 9, $23.95*

8. ANALYZING EXPERIMENTAL DATA BY REGRESSION

By David M. Allen, Ph.D., University of Kentucky, and Foster B. Cady, Ph.D., Cornell University

Featuring use of packaged computer programs, including STAN, this guide helps researchers formulate a strategy of data analysis, fit models under a variety of conditions, select appropriate models, cope with errors and variations, and analyze data under different circumstances. *394 pages, 7⅜ x 9¼, $34.95*

9. THE MODERN FORECASTER The Forecasting Process Through Data Analysis

By Hans Levenbach, Ph.D., Core Analytics, Inc., and James P. Cleary, M.B.A., AT&T Information Systems

Emphasizing modern methods practiced by leading American corporations, this guide is a one-term text for a beginning course in forecasting. *450 pages, 6½ x 9¼, $34.95*

Also available: System diskette, Systems Manual and Do-It-Yourself Primer on Business Forecasting available through: Core Analytics, Inc., 674 Routes 202-206 North, Bridgewater, NJ 08807

10. ANALYZING RESEARCH DATA The Basics of Biomedical Research Methodology

By Ronald G. Marks, Ph.D., University of Florida

Shows how to choose appropriate statistical analysis methods and interpret results from a computer printout. "A welcome addition."—*Journal of Toxicology and Environmental Health. 210 pages, 6½ x 9¼, $27.00*

11. APL-STAT A Do-It-Yourself Guide to Computational Statistics Using APL

By James B. Ramsey, Ph.D., New York University, and Gerald L. Musgrave, Ph.D., University of Michigan

Emphasizes obtaining statistical results with a minimum of effort and no prior knowledge of computers. "...explains APL in a very clear and systematic manner..."—*Technometrics. 340 pages, 8½ x 11, $21.00 paper, Solutions Manual $5.95*

12. CLUSTER ANALYSIS FOR RESEARCHERS

By H. Charles Romesburg, Utah State University

A simple, non-mathematical presentation of cluster analysis that emphasizes practical examples and the use of computers. Also available are CLUSTAR and CLUSTID, separate Fortran IV programs developed for those who use cluster analysis. *400 pages, 6½ x 9¼, $37.95, Special package, including book and computer programs pack $175.00*

13. MATHEMATICAL ANALYSIS OF PHYSICAL SYSTEMS

Edited by Ronald E. Mickens

Clearly demonstrates that unity of nature is revealed through its mathematical expression. *352 pages, 6 x 9, 78 illustrations, $64.50*

The Latest in Statistics . . . from Springer-Verlag

Characterization Problems Associated with the Exponential Distribution

T.A. Azlarov and **N.A. Volodin**

This book presents, as clearly and completely as possible, formulations of characterization problems and methods of solution for the exponential distribution. This subject is of great practical and theoretical value especially in engineering where the exponential distribution is particularly useful for problems such as calculating the reliability of instruments and systems.

1986/137 pages/Cloth $24.00
ISBN 0-387-96316-2

Principal Component Analysis

I.T. Jolliffe

This book is the first comprehensive text to be written on Principal Component Analysis, and is an up-to-date and definitive reference for the subject. The book will be useful to statisticians working in industry, as well as to academic statisticians. Its wealth of applications, modifications, and other newly developed aspects of the technique makes this volume an invaluable source of information.

1986/271 pages/26 illus/Cloth $39.00
Springer Series in Statistics
ISBN 0-387-96269-7

Non-Uniform Random Variate Generation

L. Devroye

This book deals with a field on the crossroads of statistics, operations research, and computer science. Statisticians need random number generators to test and compare estimators before using them in real life. In operations research, random numbers are a key component in large scale simulations. Computer scientists need randomness in program testing, game playing, and comparisons of algorithms. This volume, though theoretical in character, will be of great practical use to anyone who uses random numbers.

1986/843 pages/Cloth $68.00
ISBN 0-387-96305-7

Constructive Combinatorics

D. Stanton and **D. White**

Constructive Combinatorics is a modern introductory text in combinatorics. The emphasis is on the algorithmic approach: using combinatorial algorithms as constructive proofs of theorems and as sources of data for conjectures. These algorithms are listed in a shorthand Pascal, but a knowledge of Pascal is not required to understand them. This book will be of great interest to statisticians using combinatorics as well as to computer science students.

Forthcoming . . .

Graphical Exploratory Data Analysis

S.H.C. du Toit, **A.G.W. Steyn**, and **R.H. Stumpf**

Contents: The Role of Graphics in Data Exploration. Graphics for Univariate and Bivariate Data. Graphics for Selecting a Probability Model. Visual Representation of Multivariate Data. Cluster Analysis. Multidimensional Scaling. Graphical Representations in Regression Analysis. Chaid and Xaid: Exploratory Techniques for Analyzing Extensive Data Sets. Control Charts. Time Series Representations. Further Useful Graphics.

Jack Carl Kiefer Collected Papers

Supplementary Volume

Edited by **L.D. Brown**, **I. Olkin**, **J. Sacks**, and **H.P. Wynn**

1986/approx 56 pages/Cloth $20.00 (tent)
ISBN 0-387-96383-9

Graphs and Combinatorics

Editor-in-Chief: **Hoon Heng Teh**, Singapore

An international journal devoted to research concerning all aspects of combinatorial mathematics including: classical and algebraic graph theories; random graphs; set systems; enumeration; combinatorial design; combinatorial geometry; and coding, matroid, and Ramsey theories.
ISSN 0911-0119 Title No. 373

1985, Volume 1 (4 issues): $108.00
1986, Volume 2 (4 issues): $108.00

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

The purpose of The Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

OFFICERS AND EDITORS

President:
Paul Meier, Department of Statistics, University of Chicago, 5734 University Avenue, Chicago, Illinois 60637

President-Elect:
Ronald Pyke, Department of Mathematics GN-50, University of Washington, Seattle, Washington 98195

Past President:
Oscar Kempthorne, Department of Statistics, 111B Snedecor Hall, Iowa State University, Ames, Iowa 50011

Executive Secretary:
Francisco J. Samaniego, Division of Statistics, 469 Kerr Hall, University of California, Davis, California 95616

Treasurer:
Nicholas P. Jewell, Group in Biostatistics, University of California, Berkeley. *Please send correspondence to*: IMS Business Office, 3401 Investment Boulevard #7, Hayward, California 94545

Program Secretary:
Richard A. Johnson, Department of Statistics, University of Wisconsin, 1210 West Dayton Street, Madison, Wisconsin 53706

Editor: *The Annals of Statistics*
Willem R. van Zwet, Department of Mathematics, University of Leiden, P.O. Box 9512, 2300 RA Leiden, The Netherlands

Editor: *The Annals of Probability*
Thomas M. Liggett, Department of Mathematics, University of California, Los Angeles, California 90024

Executive Editor: *Statistical Science*
Morris H. DeGroot, Department of Statistics, Carnegie-Mellon University, Pittsburgh, Pennsylvania 15213

Editor: *The IMS Bulletin*
William C. Guenther, Department of Statistics, University of Wyoming, Laramie. *Please send correspondence to*: Box 3332 University Station, Laramie, Wyoming 82071

Editor: *The IMS Lecture Notes—Monograph Series*
Shanti S. Gupta, Department of Statistics, Purdue University, West Lafayette, Indiana 47907

Managing Editor:
Paul Shaman, Department of Statistics, University of Pennsylvania, Philadelphia, Pennsylvania 19104

Journals. The scientific journals of the Institute are *The Annals of Statistics*, *The Annals of Probability*, and *Statistical Science*. The news organ of the Institute is *The Institute of Mathematical Statistics Bulletin*.

Individual, Institutional, and Corporate Memberships. All *individual members* receive *Statistical Science* and *The IMS Bulletin* for a basic annual dues rate of $30. Individual members may elect to receive one *Annals* for an additional $10 or both *Annals* for an additional $20. Dues allocations to each journal are set by Council resolution. Of the total dues paid, $8 is allocated to *The IMS Bulletin* and the remaining amount is allocated equally among the scientific journals received. Memberships are available at a reduced rate (40% of regular rates) for full-time students, permanent residents of developing countries, and retired members. Retired members may also elect to receive the *Bulletin* only for $10. *Institutional memberships* are available to nonprofit organizations at $225 per year and *corporate memberships* are available to other organizations at $500 per year. Institutional and corporate memberships include two multiple-readership copies of all IMS journals in addition to other benefits specified for each category (details available from the IMS Business Office).

Individual and General Subscriptions. Subscriptions are available on a calendar-year basis. For 1986, all subscriptions to one or both *Annals* automatically include one subscription to *Statistical Science*. *Individual subscriptions* are for the personal use of the subscriber and must be in the name of, paid directly by, and mailed to an individual. Individual subscriptions for 1986 are available to both *Annals* and *Statistical Science* ($79), one *Annals* and *Statistical Science* ($52), *Statistical Science* only ($25), and *The IMS Bulletin* ($15). *General subscriptions* are for libraries, institutions, and any multiple-readership use. General subscriptions for 1986 are available to both *Annals* and *Statistical Science* ($155), *The Annals of Statistics* and *Statistical Science* ($85), *The Annals of Probability* and *Statistical Science* ($80), *Statistical Science* only ($40), and *The IMS Bulletin* ($20). Air mail rates for overseas delivery of general subscriptions are $40 per title.

Correspondence. Mail to IMS should be sent to the IMS Business Office (membership, subscriptions, claims, copyright permissions, advertising, back issues), the Editor of the appropriate journal (submissions, editorial content), or the Managing Editor (production).

IMS LECTURE NOTES — MONOGRAPH SERIES

This series provides an avenue for the rapid, but carefully refereed, publication of important research results in comprehensive form and expository style. These volumes should be of great value to researchers and advanced students in statistics, probability, and related fields. The series editor is Shanti S. Gupta, Purdue University.

4 ZONAL POLYNOMIALS

by Akimichi Takemura

A self-contained development of zonal polynomials in the framework of standard multivariate analysis.

Zonal polynomials have been used extensively in the study of noncentral multivariate distributions. This easily understood treatment uses only the standard tools of linear algebra and multivariate normal distribution theory.

110 pages
List price $15
IMS members $9

5 INEQUALITIES IN STATISTICS AND PROBABILITY

edited by Y. L. Tong

Proceedings of the Symposium on Inequalities in Statistics and Probability held in Lincoln, Nebraska during October 1982.

This volume reports on the recent rapid growth in the field of inequalities due, in part, to widespread applications in reliability theory, in multivariate nonnormal analysis, and in optimization and constraint problems. The volume contains thirty expository and research papers by leaders in the field.

263 pages
List price $25
IMS members $15

6 THE LIKELIHOOD PRINCIPLE

by James Berger and Robert Wolpert

A comprehensive presentation and criticism of the likelihood principle and its generalizations.

This book provides a non-technical development of the likelihood principle with attention to some of its surprising implications for such areas as randomization analysis, censoring, significance testing, and sequential analysis. The authors also discuss generalizations and implementations of the likelihood principle.

217 pages
List price $25
IMS members $15

& ADDITIONAL TITLES

Previously published: Volume 1, *Essays on the Prediction Process* by Frank Knight ($15/members $9); Volume 2, *Survival Analysis* edited by John Crowley and Richard A. Johnson ($25/members $15); Volume 3, *Empirical Processes* by Peter Gaenssler ($20/members $12). Forthcoming: *Fundamentals of Statistical Exponential Families* by L. Brown, *Approximate Computations of Expectations* by C. Stein, *Adaptive Statistical Procedures and Related Topics* edited by T. L. Lai and J. Van Ryzin, *Differential Geometry in Statistical Inference* by S. Amari, O. Barndorff-Nielsen, R. Kass, S. Lauritzen, and C. R. Rao, and *Group Theory in Statistics* by P. Diaconis.

Prepaid orders for individual volumes and requests for standing order enrollment (eligible for 20% prepublication discounts from list prices) should be sent to
