

NOTE

CORRECTION TO "PREDICTIVE LIKELIHOOD"

BY DAVID V. HINKLEY

University of Minnesota

P. R. Freeman has pointed out that the last expression on page 722 of the above paper (*Ann. Statist.* (1979) 7 718–28) should be

$$= ms^{m-1} / \{(m+1)t^m\}$$

with a resulting change on line 3 of page 723. The likelihood $lik^*(z|s)$ is then continuous.
