

## VOLUME INDEX

- Baturev, A.A., *Approximate methods for singular integral equations with a non-Carleman shift*, 1.
- Campbell, S.L., *Convergence estimates for solution of integral equations with GMRES*, 19.
- Castro, L.P., *On the inversion of higher order Wiener-Hopf operators*, 269.
- Chur-Jen, Chen, *Nonlinear integro-differential equations of Barbashin type: Topological and monotonicity methods*, 287.
- Desch, Wolfgang, *Passive boundary damping of viscoelastic structures*, 125.
- Erbe, L.H., *Integral equations convertible to fixed point equations of order-preserving operators*, 35.
- Golberg, Michael, *Improved convergence rates for some discrete Galerkin methods*, 307.
- Hannsgen, Kenneth B., see Desch, Wolfgang.
- Hansen, Olaf, *On the solution of a special kind of singular integral equation*, 391.
- Heuer, N., *The hp-version of the boundary element method on polygons*, 173.
- Heuer, Norbert, *Efficient algorithms for the p-version of the boundary element method*, 337.
- Hu, Shouchuan, see Erbe, L.H.
- Ipsen, I.C.F., see Campbell, S.L.
- Jandhyala, V.K., *Eigenvalues of a Fredholm integral operator and applications to problems of statistical inference*, 413.
- Jiang, P.L., see Jandhyala, V.K.
- Karapetyants, Nikolai K., *On the solution of nonlinear Volterra convolution equation with power nonlinearity*, 429.
- Kelley, C.T., see Campbell, S.L.
- Kilbas, Anatoly A., see Karapetyants, Nikolai K.
- Kravchenko, V.G., see Baturev, A.A.
- Li, Yizeng, *Stability problems of functional differential equations with abstract Volterra operator*, 47.
- Litvinchuk, G.S., see Baturev, A.A.
- Meyer, C.D., see Campbell, S.L.
- Oka, Hirokazu, *Second order linear Volterra equations governed by a sine family*, 447.
- Pani, Amiya K., *On superconvergence results and negative norm estimates for parabolic integro-differential equations*, 65.
- Park, Chull, *Grid-valued conditional Yeh-Wiener integrals and a Kac-Feynman Wiener integral equation*, 213.
- Piila, Jyrki, *On the integral equation  $f(x) - (c/L(x)) \int_0^{L(x)} f(y) dy = g(x)$  where  $L(x) = \min\{ax, 1\}$ ,  $a > 1$* , 363.
- Pitkäranta, Juhani, see Piila, Jyrki.
- Propst, Georg, *On wave equations with boundary dissipation of memory type*, 99.
- Prüss, Jan, see Propst, Georg.
- Saigo, Megumi, see Karapetyants, Nikolai K.
- Schiavone, Peter, *On the Robin problem for the equations of thin plates*, 231.
- Sinha, Rajen K., see Pani, Amiya K.
- Skoug, David, see Park, Chull.
- Speck, F.-O., see Castro, L.P.

- Stephan, E.P., see Heuer, N.
- Stephan, Ernst P., *Localization and post processing for the Galerkin boundary element method applied to three-dimensional screen problems*, 457.
- Tran, Thanh, see Stephan, Ernst P.
- Väh, Martin, *A general theorem on continuity and compactness of the Uryson operator*, 379.
- Wheeler, Robert L., see Desch, Wolfgang.
- Xu, Yuesheng, *Quadratures for boundary integral equations of the first kind with logarithmic kernels*, 239.
- Xue, Z.Q., see Campbell, S.L.
- Zhao, Yunhe, see Xu, Yuesheng.
