

EDITORIAL MESSAGES

The past decade has seen a vast proliferation of published mathematical research literature. As a result the established mathematical journals have been inundated with research papers and the impact of this has been that one of the original purposes of the mathematical journal, that of an efficient disseminator of mathematical knowledge has been undermined. Indeed the time interval between an article's acceptance and that article's appearance can be as long as three years. Thus, the need for a forum for truly current mathematical research is evident. The Real Analysis Exchange has been created to fill this vacuum in the areas of real analysis, functions of real variables, and real set theory. The service the Exchange provides to mathematicians will be, as we envision it, two-fold.

First, a booklet will be published twice per year which will contain three major sections, each of which is briefly described below.

Section 1: Topical Surveys

This section consists of survey articles concerning one area of current research activity. These articles differ from survey articles in major journals both in their more limited scope and greater depth. Such a survey article should indicate a stream of mathematical thought from origins of the current problem area up to and including unpublished results.

Section 2: Inroads

This second section consists of annotated abstracts of the recent work of real analysts coupled with bibliographic information concerning this work. In addition, the Inroads section can well serve the need to publicize real analysis dissertation results.

Section 3: Queries

In this section problems are presented together with appropriate bibliographical and historical information. This is not meant to be a recreational section but a forum for the presentation of unsolved problems in specific areas of real analysis.

Notice to Contributors

1. Any author interested in writing a Topical Survey article should contact one of the Managing Editors for information concerning format and length.
2. Inroads articles should be typed in camera-ready form. They should have one inch margins on the top and bottom and one and one-half inch margins on both sides for binding purposes. If the Inroads article is an annotated abstract of a more complete paper which is already in preprint form, we would also appreciate receiving one copy of the preprint so that we can send it to subscribers requesting this service. The deadline for acceptance of Inroads articles is October 15 for the Winter edition of the Exchange. The deadline for the Spring Exchange is March 15.
3. Queries should be typed and any appropriate bibliographical or historical information should be included. Solutions to previous Queries should have the same margins as the Inroads articles and should also be in camera-ready form. Lengthy Query solutions will be published within the Inroads section of the Exchange. The deadline for Queries to be published in the Winter Exchange is November 1 and the deadline for the Spring Exchange is March 15.

All correspondence with the Exchange should be sent to the following address.
