

# ANNALES DE L'INSTITUT HENRI POINCARÉ

## PROBABILITÉS ET STATISTIQUES

<b>Reversed Dirichlet environment and directional transience of random walks in Dirichlet environment</b>	<i>C. Sabot and L. Tournier</i>	1–8
<b>On Wiener–Hopf factors for stable processes</b>	<i>P. Graczyk and T. Jakubowski</i>	9–19
<b>Long-range self-avoiding walk converges to <math>\alpha</math>-stable processes</b>	<i>M. Heydenreich</i>	20–42
<b>Adaptive Dantzig density estimation</b>	<i>K. Bertin, E. Le Pennec and V. Rivoirard</i>	43–74
<b>The triangle and the open triangle</b>	<i>G. Kozma</i>	75–79
<b>Annealed upper tails for the energy of a charged polymer</b>	<i>A. Asselah</i>	80–110
<b>Asymptotics for the survival probability in a killed branching random walk</b>	<i>N. Gantert, Y. Hu and Z. Shi</i>	111–129
<b>Windings of planar random walks and averaged Dehn function</b>	<i>B. Schapira and R. Young</i>	130–147
<b>Disorder relevance at marginality and critical point shift</b>	<i>G. Giacomin, H. Lacoïn and F. L. Toninelli</i>	148–175
<b>Adaptive tests of homogeneity for a Poisson process</b>	<i>M. Fromont, B. Laurent and P. Reynaud-Bouret</i>	176–213
<b>Process-level quenched large deviations for random walk in random environment</b>	<i>F. Rassoul-Agha and T. Seppäläinen</i>	214–242
<b>Limits of determinantal processes near a tacnode</b>	<i>A. Borodin and M. Duits</i>	243–258
<b>Disorder relevance for the random walk pinning model in dimension 3</b>	<i>M. Birkner and R. Sun</i>	259–293
<b>Variance decay for functionals of the environment viewed by the particle</b>	<i>J.-C. Mourrat</i>	294–327
