

ANNALES DE L'INSTITUT HENRI POINCARÉ

PROBABILITÉS ET STATISTIQUES

| | | |
|--|---|-----------|
| Fires on trees | <i>J. Bertoin</i> | 909–921 |
| Collisions of random walks | <i>M. T. Barlow, Y. Peres and P. Sousi</i> | 922–946 |
| Invariance of Poisson measures under random transformations | <i>N. Privault</i> | 947–972 |
| Coexistence probability in the last passage percolation model is $6 - 8 \log 2$ | <i>D. Coupier and P. Heinrich</i> | 973–988 |
| The critical barrier for the survival of branching random walk with absorption | <i>B. Jaffuel</i> | 989–1009 |
| Superdiffusivity for Brownian Motion in a Poissonian potential with long range correlation I: Lower bound on the volume exponent | <i>H. Lacoïn</i> | 1010–1028 |
| Superdiffusivity for Brownian motion in a Poissonian potential with long range correlation II: Upper bound on the volume exponent | <i>H. Lacoïn</i> | 1029–1048 |
| The discrete-time parabolic Anderson model with heavy-tailed potential | <i>F. Caravenna, P. Carmona and N. Pétrélis</i> | 1049–1080 |
| Tail asymptotics for exponential functionals of Lévy processes: The convolution equivalent case | <i>V. Rivero</i> | 1081–1102 |
| Tail and moment estimates for chaoses generated by symmetric random variables with logarithmically concave tails | <i>R. Adamczak and R. Łatała</i> | 1103–1136 |
| On conditional independence and log-convexity | <i>F. Matúš</i> | 1137–1147 |
| Challenging the empirical mean and empirical variance: A deviation study | <i>O. Catoni</i> | 1148–1185 |
| Adaptive wavelet estimation of the diffusion coefficient under additive error measurements <i>M. Hoffmann, A. Munk and J. Schmidt-Hieber</i> | | 1186–1216 |
| Efficient robust nonparametric estimation in a semimartingale regression model | <i>V. Konev and S. Pergamenscbikov</i> | 1217–1244 |
