

U. S. POSTAL SERVICE STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION (Act of August 12, 1970, Section 3685, Title 39, United States Code)		SEE INSTRUCTIONS ON PAGE 2 (REVERSE)
1 TITLE OF PUBLICATION ANNALS OF MATHEMATICAL STATISTICS		2 DATE OF FILING
3 FREQUENCY OF ISSUE BY MONTHLY		
4 LOCATION OF HEADQUARTERS OFFICE OF PUBLICATION (Street, city, county, state, ZIP code) (Not printers)		
5 LOCATION OF THE HEADQUARTERS FOR GENERAL BUSINESS OFFICES OF THE PUBLISHERS (Not printers)		
6 NAMES AND ADDRESSES OF PUBLISHER, EDITOR, AND MANAGING EDITOR		
PUBLISHER (Name and address)		
Waverly Press, Inc. Mt. Royal & Gullford Aves. Baltimore, Maryland 21202		
EDITOR (Name and address)		
Dr. Ingram Olkin (Statistics) Stanford University Stanford, Calif. 94305		
MANAGING EDITOR (Name and address)		
Dr. K. J. C. Smith (Statistics) Univ. of North Carolina Chapel Hill, N. C. 27514		
7 OWNER (If owned by a corporation, its name and address must be stated and immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a partnership or other unincorporated firm, its name and address, as well as that of each individual must be given.)		
NAME ADDRESS		
None		
TOTAL AMOUNT OF BONDS, MORTGAGES OR OTHER SECURITIES (If there are none, so state)		
NAME ADDRESS		
None		
8 FOR OFFICIAL COMPLETION BY PUBLISHERS MAILING AT THE REGULAR RATES (Section 132.151, Postal Service Manual)		
9 FOR COMPLETION BY NONPROFIT ORGANIZATIONS AUTHORIZED TO MAIL AT SPECIAL RATES (Section 132.722, Postal Manual) (Check one)		
The purpose, function, and nonprofit status of this organization, and the exempt status for Federal income tax purposes <input checked="" type="checkbox"/> Have not changed during preceding 12 months <input type="checkbox"/> Have changed during preceding 12 months (If changed, publisher must submit explanation of change with this statement.)		
11 EXTENT AND NATURE OF CIRCULATION		
A TOTAL NO. COPIES PRINTED (Net Press Run)		
6139 6151		
B PAID CIRCULATION		
1 SALES THROUGH DEALERS AND CARRIERS STREET VENDORS AND COUNTER SALES		
None None		
2 MAIL SUBSCRIPTIONS		
4912 4955		
C TOTAL PAID CIRCULATION		
4912 4955		
D FREE DISTRIBUTION BY MAIL, CARRIER OR OTHER MEANS		
1 SAMPLES, COMPLIMENTARY, AND OTHER FREE COPIES		
12 12		
2 COPIES DISTRIBUTED TO NEWS AGENTS, BUT NOT SOLD		
None None		
E TOTAL DISTRIBUTION (Sum of C and D)		
4924 4967		
F OFFICE USE, LEFT-OVER, UNACCOUNTED, SPOILED AFTER PRINTING		
1215 1184		
G TOTAL (Sum of E & F—should equal net press run shown in A)		
6139 6151		
(Signature of editor, publisher, business manager, or owner)		
Robert H. Glendell, Treasurer		
I certify that the statements made by me above are correct and complete		

JOURNAL OF THE ROYAL STATISTICAL SOCIETY

THE JOURNAL OF THE ROYAL STATISTICAL SOCIETY is published in three series, SERIES A (GENERAL), four issues a year, annual subscription, post free, £6. U. S. \$15: price each part £2: SERIES B (METHODOLOGICAL), three issues a year, annual subscription post free, £4.75 U. S. \$12: price each part £2: SERIES C (APPLIED STATISTICS), three issues a year, annual subscription £3; U. S. \$7.50, price each part £1.35.

Contents of SERIES B (METHODOLOGICAL), Vol. 34, No. 3, 1972

Order invariant methods for data analysis (with Discussion) R. SIBSON
 Outliers in time-series A. J. FOX
 Linear ordered rank tests which are asymptotically efficient for the two sample problem J. V. DESHPANDÉ
 Analysis of log-linear models D. V. COKHALE
 Resolution IV of the $2^m \times 3$ series D. A. ANDERSON AND J. N. SRIVASTAVA
 Non-parametric function fitting M. B. PRIESTLEY AND M. T. CHAO
 Generalized least squares and maximum likelihood estimation of non-linear functional relationships G. R. DOLBY
 Two-factor experiments in non-orthogonal designs T. M. F. SMITH AND J. A. JOHN
 Minimum risk estimators with applications G. B. SWARTZ AND V. K. MURTHY
 Properties of the Wald sequential procedure for a two-sided alternative hypothesis for a normal mean LYNNE BILLARD
 A comparison of methods of sampling from a Poisson process G. M. EL-SAYYAD
 Non-orthogonal main effect designs for asymmetrical factorial experiments B. H. MARGOLIN
 Numerical results on approximate confidence limits for the odds ratio J. J. GART AND D. G. THOMAS
 Comparison of some two-sample tests for non-normal alternatives A. A. AFFEI AND P. J. KIM
 An asymptotically efficient sequential equivalent of the *t*-test L. WEISS AND J. WOLFOWITZ
 The number of variables when searching for an optimum R. N. CURNOW
 Comments and Queries
 Comments on R. N. Curnow's "The number of variables when searching for an optimum" R. J. BROOKS; D. J. FINNEY; S. C. PEARCE; F. YATES

The Royal Statistical Society, 21 Bentinck Street, London, W. 1

BIOMETRICS

Journal of the Biometric Society

Vol. 30, No. 1

CONTENTS

March 1973

A smooth population response curve based on an abrupt threshold and plateau model for individuals	<i>R. N. Curnow</i>
On the estimation of heteroscedastic variances.....	<i>J. N. K. Rao</i>
Testing group effects from Type II censored normal samples in experimental design.....	<i>M. L. Tiku</i>
The analysis of designed experiments with censored observations.....	<i>J. Taylor</i>
On Tukey's test of additivity.....	<i>B. A. Rojas</i>
Minimum mutation fits to a given tree.....	<i>J. A. Hartigan</i>
A note on the methodology of Knox's tests of "time and space interaction".....	<i>O. Abe</i>
The effects of unequal catchability on Jolly-Seber estimates.....	<i>A. D. Carothers</i>
Optimum sample sizes for the comparison of the control and treatment.....	<i>J. M. Nam</i>
Tolerance limits for the distribution of the product and quotient of normal variates	<i>I. J. Hall and C. B. Sampson</i>
Regression toward the mean in uncontrolled clinical studies.....	<i>K. E. James</i>
The analysis of incomplete block designs as used in the group screening of drugs.....	<i>M. A. Moran</i>
An analysis for compounded functions of categorical data.....	<i>R. N. Forthofer and G. G. Koch</i>
Matching to remove bias in observational studies.....	<i>D. B. Rubin</i>
The use of matched sampling and regression adjustment to remove bias in observational studies	<i>D. B. Rubin</i>
The analysis of residuals in cross-classified tables.....	<i>S. J. Haberman</i>

Biometrics is published quarterly. Its objects are to describe and exemplify the use of mathematical and statistical methods in biological and related sciences in a form assimilable by experimenters. Inquiries should be addressed to: Biometrics Business Office, Department of Experimental Statistics, North Carolina State University, Raleigh, North Carolina 27607.

TECHNOMETRICS

*A Journal of Statistics
for the Physical, Chemical and Engineering Sciences*

CONTENTS

TECHNOMETRICS, Vol. 15, No. 1, FEBRUARY 1973

Formulation of a Nonlinear Predictor	Judith Nelson and John Van Ness
Discussion	William H. Lawton
Likelihood Ratio Test for Discrimination Between Two Models with Unknown Location and Scale Parameters	Robert Dumonceaux, Charles E. Anile and Gerald Haas
Discussion	H. Leon Harter
Some Problems Associated with the Analysis of Multiresponse Models	George E. P. Box, William H. Hunter, J. F. MacGregor and J. Erjavec
Errors of Measurement, Precision, Accuracy and the Statistical Comparison of Measuring Instruments	Frank E. Grubbs
A Comparison of Some Models in Visual Scanning Experiments	Lalitha Sanathanan
A Truncated Sequential t -Test for General α and β	Robert Alexander and Ronald C. Suich
Tables for Obtaining Weibull Confidence Bounds and Tolerance Bounds Based on Best Linear Invariant Estimates of Parameters of the Extreme-Value Distribution	Nancy R. Mann and Kenneth W. Fertig
Quality Control Methods for Multivariate Binomial and Poisson Distributions	H. I. Palel
Response Surface Optimization when Experimental Factors are Subject to Costs and Constraints	N. B. Heller and Glenn Staats
Best Test for Zero Drift Based on First Passage Times in Brownian Motion	Arthur Nadas
Linear Estimation of a Regression Relationship from Censored Data Part II-Best Linear Unbiased Estimation and Theory	Wayne Nelson and Gerald Hahn
A Dual Purpose Cost Based Quality Control System	J. W. Schmidt, Jr. and R. E. Taylor
Detection of Failure Rate Increases	G. Lorden and I. Eisenberger
On a Test for the Equality of Two Exponential Distributions	David G. Weinman, Gene Dugger, W. E. Granck and John E. Hewett
NOTES	
On the Performance of Power of Tests for the Comparison of Exponential Distributions	Satya D. Dubey
Double Sample Tests for Hypothesis about the Mean of an Exponential Distribution	William G. Bulgren and John E. Hewett
Determination of Number of Failures to Control Risks of Erroneous Judgments in Exponential Life Testing	Frank E. Grubbs
BOOK REVIEWS	
BOOK REVIEWS-INDEX 1972	
LETTER TO THE EDITOR	

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D. C. 20004.

THE ANNALS OF MATHEMATICAL STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

Abstract. Each manuscript is required to contain an abstract, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of an abstract will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Abstract", followed by the title of the paper. Formulas should be used as sparingly as possible. The abstract should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classification. Primary—; Secondary—.

Key words and phrases:

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616–618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^{bc} and a_{bc} , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

- [5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Math. Statist.* 9 60–62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews* Index to Volume 40, 1970, pp. 1683–1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.)

Contents (Continued)

An exponential probability bound for the energy of a type of Gaussian process L. H. KOOPMANS AND C. QUALLS	1953
Markovian interaction processes with finite range interactions.	RICHARD HOLLEY 1961
On Markov processes with right-deterministic germ fields.	FRANK B. KNIGHT 1968
Short Communications	
Selection sample size approximations.	JOHN S. RAMBERG 1977
On selecting the least probable multinomial event KHURSHEED ALAM AND JAMES R. THOMPSON	1981
On the efficiency of a competitor of the two-sample Kolmogorov-Smirnov and Kuiper tests.	RAMON C. LITTELL 1991
Bayes estimation of the mixing distribution, the discrete case.	GLEN MEEDEN 1993
On the correlation coefficient of a bivariate, equal variance, complex Gaussian sample TOBY BERGER	2000
On a class of aligned rank order tests for the identity of the intercepts of several regression lines.	PRANAB KUMAR SEN 2004
Asymptotic properties of rank tests of symmetry under discrete distributions DANA VOŘLÍKOVÁ	2013
A note on partitioning a set of normal populations by their locations with respect to two controls.	PAUL SEEGER 2019
The mixed effects model and simultaneous diagonalization of symmetric matrices ROBERT HULTQUIST AND ERWIN M. ATZINGER	2024
Successive sampling with $p(p \geq 1)$ auxiliary variables.	A. R. SEN 2031
A Cramér von Mises type statistic for testing symmetry E. D. ROTHMAN AND MICHAEL WOODROOFE	2035
A note on symmetric random variables.	DAVID L. BURDICK 2039
Unimodality of the distribution of an order statistic.	KHURSHEED ALAM 2041
Minimal sufficient σ -fields and minimal sufficient statistics. Two counterexamples DIETER LANDERS AND LOTHAR ROGGE	2045
An upper bound for the renewal function.	CHARLES J. STONE 2050
A converse to a combinatorial limit theorem.	J. ROBINSON 2053
On limit theorems for quadratic functions of discrete time series E. J. HANNAN AND C. C. HEYDE	2058
On a certain class of limit distributions.	R. SHANTARAM AND W. HARKNESS 2067
On a theorem of de Finetti, oddsmaking, and game theory DAVID C. HEATH AND WILLIAM D. SUDDERTH	2072
A countable policy set for sequential decision problems JOHN E. ROLPH AND RALPH E. STRAUCH	2078
On the multiplicity of a class of multivariate random processes A. EPHEMIDES AND J. B. THOMAS	2083
Estimates of the rates of convergence in limit theorems for the first passage times of random walks.	DOUGLAS P. KENNEDY 2090
Pairs of one dimensional random walk paths.	C. H. RAIFAIZEN 2095
A critical age-dependent branching process with immigration.	HOWARD J. WEINER 2199
Feller's parametric equations for laws of the iterated logarithm HOWARD H. STRATTON	2104
Contents of Volume 43.	iii
