JOURNAL OF THE AMERICAN STATISTICAL ASSOCIATION

Volume 67  December 1972  Number 340

Applications
Statistics and Political Science  James L. Hunter
The Distribution by Age of the Frequency of First Marriage in a Female Cohort  A. J. Coale and D. R. McNeil
Stochastic Simulation of Monetary Rules in Two Macroeconomic Models  J. Philip Cooper and Stanley Fischer
Inference for Markov Chains Having Stochastic Entry and Exit  George T. Duncan and Libbie G. Lin
A Model Search Technique for Predictive Nominal Scale Multivariate Analysis  Robert Messenger and Lewis Mandell
The American Jury: A Critique  A. E. Bottoms and Monica A. Walker
An Application of Multivariate Analysis to Complex Sample Survey Data  Gary G. Koch and Stanley Lemeshow
A Linear Models Approach to the Analysis of Survival and Extent of Disease in Multi-Dimensional Contingency Tables  Gary G. Koch, William D. Johnson and H. Dennis Tooley
The Keynesian Aggregate Supply Function for Labor  James M. Holmes
Note on Owner's Estimate of Housing Value  John F. Kain and John M. Quigley
The Distribution of Stock Returns  R. R. Officer
Asymmetric Stable Distributions of Stock Price Changes  B. D. Fielitz and E. W. Smith

Theory and Methods
Linear Dynamic Recursive Estimation from the Viewpoint of Regression Analysis  D. B. Duncan and S. D. Horn
Dependence and Aging Aspects of Multivariate Survival  E. C. Brinkley, Jr. and W. A. Thompson, Jr.
Interrelated Bernoulli Processes  Gordon R. Anselman
Estimation in Univariate and Multivariate Stable Distributions  S. James Press
Asymptotically Optimal Group Rank Tests for Location  Richard A. Groeneveld
Asymptotic Behavior of Two-Sample Tests Based on Powers of Ranks for Detecting Scale and Location Alternatives  Paul W. Muller, Jr.
A Distribution-Free Normal Scores Test for Ordered Alternatives in the Randomized Block Design  Walter R. Pirie and Myles Hollander
More on Concepts of Statistical Evidence  Allan Birnbaum
An Analysis of a Two-Way Model with Interaction and No Replication  Dallas E. Johnson and Franklin A. Graybill
Optimal Designs for Estimating the Slope of a Polynomial Regression  V. N. Murty and W. J. Studden
Test Data for Statistical Algorithms: Least Squares and ANOVA  W. Keith Hastings
Elicitation of Subjective Probabilities by Sequential Choices  Arlo D. Hendrickson and Robert J. Buehler
Upper and Lower Probability Inferences from Ordered Multinomial Data  Herbert Wetsberg
The Fitting of Straight Lines When Both Variables Are Subject to Error and the Ranks of the Means Are Known  James H. Ware
A Gaussian Approximation to the Distribution of a Definite Quadratic Form  D. R. Jensen and Herbert Solomon
Properties of the Bivariate Normal Cumulative Distribution  Dennis P. Tynkowsky
Two Distributions Involving a Bessel Function  G. M. Keenan
Products of Independent Beta Variables with Application to Connor and Mosiman's Generalized Dirichlet Distribution  Ian R. James
Estimation for Domains in Multi-Stage Sampling  Myntu Tim and Tham Toe
On the Asymptotic Power of Tests for Independence in Contingency Tables from Stratified Samples  Gad Nathan
Continuous Sequential Testing of a Poisson Process to Minimize the Bayes Risk  Harold F. Rumsey
Estimation and Hypothesis Testing for the Parameters of a Bivariate Exponential Distribution  Bruce M. Benis, Lee J. Bain and James J. Higgins
Estimation of the Slope and Analysis of Covariance When the Concomitant Variable is Measured with Error  James S. DeGracie and Wayne A. Fuller
Simultaneous Prediction Intervals to Contain the Standard Deviations or Ranges of Future Samples from a Normal Distribution  Gerald J. Hahn
A Probabilistic Model for Identifying Errors in Data Editing  Joseph I. Naus, Thomas G. Johnson and Ramiro Montalvo

TRabajos de Estadística y de Investigación Operativa

VOL. XXIII CONTENTS CUAD. 1 y 2
MA PILAR IBAÑOZ.-La estimación empírico Bayes en modelos de regresión lineal no ortogonales.
R. INFANTE MACHAR.-Nota sobre programación lineal esotéctica. Evolución y estado actual.
RASHID AHMED.-Extension of the normal theory to spherical families.
PROF. LA A. ANAND.-Decomposition principle for indefinite quadratic programs.
EMMANUEL S. AITZ.-A class of experimental designs.
R. C. JAIN and J. K. TAILOR.-A note on test of hypothesis about mean after preliminary testing.
N. L. JOHNSON.-Sample size. Sequences of sampling.
A. M. MATHAI.-The exact distribution of a criterion for testing the hypothesis that the covariance is diagonal.
L. K. ROY.-The logarithmic distribution of first passage time of standard Brownian motion.
R. SINHA.-Estimable elements in the normal distribution with quadratic loss.
S. S. SRIVASTAVA, R. C. GARG and S. D. ARORA.-Two-sided a/s warfare with limited ammunition range and fire power.
G. K. VARMA.-On parametric linear fractional functionals programming.
J. E. WALSH.-Exact results for extensions of twofold nested ANOVA for variance components.
J. ANLAN.-A note on optimum sampling strategies.

NOTAS:
SIURO RIOS.-Palabras pronunciadas en la inauguración de la VI Reunión Nacional de I.O.
M. M. ALBERTO ADAMEZ.-Aplicaciones probabilísticas de la transformación de Mellin.
J. MIRAS AMOR.-Nota sobre errores de muestreo.

Crónica Bibliografía Cuestiones y Ejercicios

TRabajos de Estadística y de Investigación Operativa is published three issues a year. Annual subscription price is U.S. $7; each part U.S. $3.

All correspondence should be addressed to Prof. Sixto Ríos, Serrano 123, Madrid-6. Spain.

Technometrics

A Journal of Statistics for the Physical, Chemical and Engineering Sciences

CONTENTS

Self Modeling Nonlinear Regression.. W. R. Lawton, E. A. Sylven and M. S. Maggio
On the Problem of Calibration.. G. K. Shukla
Type-I Error and Power of a Test Involving a Satterthwaite’s Approximate F-Statistic James M. Davisport and J. T. Webster
Effect of Non-Normality on Tolerance Limits which Control Percentages in Both Tails of Normal Distribution J. N. K. Rao, D. Subrahmanian and D. H. Owen
On Distribution-Free Confidence Bounds for Pr(Y < X) Hans K. Ury
An Extension of Some Grubbs-Type Statistics for the Detection of Several Outliers Gary L. Tietjen and Roger H. Moore
A Bayes Sampling Allocation Scheme for Stratified Finite Populations with Hyperbinomial Prior Distributions Doris Lloyd Grosh
On the Most Economical Choice of a Life Testing Procedure for Exponentially Distributed Data. B. J. N. Bight
Situations in Which the Arithmetic and Geometric Moving Averages are Inefficient Estimators Kirkland B. Stewart
Size Biased Sampling.. R. E. Schafer
Alternative Multi-Level Continuous Sampling Plans Harold Sackrowitz
Economic Screening of a Continuously Manufactured Product.. Edward P. C. Kan
Subsampling a Mixture of Sampled Material.. G. H. Brown and N. J. Fisker
On Designing Unknown-Sigma Sampling Plans Based on a Wise Class of Non-Normal Distributions Kinji Takaki
Linear Order Statistic Estimation for the Two-Parameter Weibull and Extreme Value Distributions from Type II Progressively Censored Samples David R. Thomas and Wanda M. Wilson
Inference Based on Censored Sampling from the Weibull or Extreme-Value Distribution. J. D. Bain
Extreme Values from a Gamma Distribution with Applications to Air Pollution Problems. N. D. Singpurwalla
Small Sample Power of Some Tests of Constant Failure Rate W. W. Furry and Larry J. Rininger
Further Remarks on Maximum Likelihood Estimators for the Gamma Distribution L. E. Schenker and K. O. Bowman
A New Test For, and Class of Transformations To, Normality.. Michael E. Tarter and Charles J. Kowalski
The Effect of Estimation Error on a Geometric Moving Average Dean W. Wichers
An Algorithm for Least Squares Estimation of Nonlinear Parameters When Some of the Parameters are Linear Richard H. Barber and W. R. Drake
Notes...

NEWS "Repairing" Response Surface Designs T. L. Himmel and T. J. Mitchell
The Use of Partial Residual Plots in Regression Analysis.. Wayne Larkin and Susan McClear
Goodness of Fit Tests for the Gamma and Exponential Distributions... Ram C. Dahiya and John Girand

BOOK REVIEWS

TECHNOMETRICS Prizes 1970 and 1971

The purpose of TECHNOMETRICS is to contribute to the development and use of statistical methods in the physical, chemical, and engineering sciences. This objective places a high premium on succinct communication among the physical scientist, engineer, statistician and mathematician. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical methods to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication.

For further information please contact TECHNOMETRICS Post Office Box 587 Benjamin Franklin Station Washington, D.C. 20004.
THE ANNALS OF MATHEMATICAL STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the Annals of Mathematical Statistics. (For current address, see the latest issue of the Annals.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will not normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be “A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law,” with the running head “Limit Theorem for Recurrent Random Walk” or possibly “Recurrent Random Walk Attracted to a Stable Law,” depending on the emphasis to be conveyed.

Abstract. Each manuscript is required to contain an abstract, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of an abstract will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading “Abstract,” followed by the title of the paper. Formulas should be used as sparingly as possible. The abstract should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classification. Primary—; Secondary—.

Key words and phrases:

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to Mathematical Reviews Index to Volume 39, June 1970. (See, also, The Notices of the American Mathematical Society, June 1970, pp. 616-618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between “oh” and “zero”, “ell” and “one”, “kappa” and “kay”, etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, \((a + b)/(c + d)\) is preferred to \(\frac{a + b}{c + d}\), and \((2\pi)^{-1}\) or \(1/(2\pi)\) to \(\frac{1}{2\pi}\). Also, \(a^{b(c)}\) and \(a_{b(c)}\) are preferred to \(a^{b\times c}\) and \(a_{b\times c}\), respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

In textual material, the format “... Wilks (1938) ...” is normally preferred to “... Wilks [5] ...”. Multiple references can be distinguished as “... Wilks (1938b) ...”. Abbreviations for journals should be taken from Mathematical Reviews Index to Volume 40, 1970, pp. 1080-1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the Annals of Mathematical Statistics. (For current address, see the latest issue of the Annals.)
Contents (Continued)

A note on fine and tight qualitative probabilities .................. Ilkka Niiniluoto 1581
Error estimates for the weak convergence to certain infinitely divisible laws .............................................. Thomas A. Hern 1592
Coding theorem for stationary, asymptotically memoryless, continuous-time channels .................................... T. T. Kadota and A. D. Wyner 1603
Markovian decision processes with compact action spaces ....... Naga Tur Furuwka 1612
Stochastic order relationships between GI/G/k systems .......... David R. Jacobs, Jr. and Siegfried Schach 1623
A representation of independent increment processes without Gaussian components .................. Thomas S. Ferguson and Michael J. Klass 1634

Short Communications

Completeness for a family of multivariate normal distributions ..... Justus Seely 1644
Alternative axiomatizations of one-way expected utility .......... Peter C. Fishburn 1648
Construction of two-level saturated symmetrical factorial designs of resolution VI ............................................ Bodh Raj Gulati 1652
On the marginal distributions of the latent roots of the multivariate beta matrix ........................................... A. W. Davis 1664
The asymptotic non-central distribution of Hotelling’s generalized $T^2$ .............................................................. R. J. Muirhead 1671
Uniform strong consistency of Rao-Blackwell distribution function estimators ............................................. Federico J. O’Reilly and C. P. Quesenberry 1678
On estimation of tail end probabilities of the sample mean for linear stochastic processes ............................... K. C. Chanda 1680
Rates of convergence for weighted sums of random variables ..... F. T. Wright 1687
The law of the iterated logarithm for the range of random walk Naresh C. Jain and William E. Pruitt 1692
A note on the classical occupancy problem ........................... C. J. Park 1698
A threshold for log-concavity for probability generating functions and associated moment inequalities ..................... J. Keilson 1702
A theorem on obstructive distributions ................................ R. A. Wijsman 1709
Hitting time distributions for general stochastic processes .... Dudley Paul Johnson 1716
On limiting distributions of a random number of dependent random variables .................................................... D. L. Thomas 1719
Convergence in distribution of random measures .................. Miloslav Jiřina 1727
On two recent papers on ergodicity in nonhomogeneous Markov chains ......................................................... Marius Iosifescu 1732
Conditions for metric transitivity for stationary Gaussian processes on groups .............................................. Julius Blum and Bennett Eisenberg 1737

Notes

Correction to “Admissible Bayes character of $T^2$, $R^2$, and other fully invariant tests for classical multivariate normal problems” J. Kiefer and R. Schwartz 1742
Correction to “Multivariate procedures invariant under linear transformations” ................................................. R. L. Obenchain 1742
Acknowledgment of priority to “On averaging over distinct units in sampling with replacement” .......................... R. M. Korwar and R. J. Serfling 1744
