Number 339

Applications

- The Effects of Discarding Inliers When Binomial Data Are Subject to Classification Errors Philip J. McCarthy
An Empirical Examination of the Classical Assumptions Concerning Errors in Data Tracy W. Murray
On Constructing Current Life Tables Chin Long Chiang
An Econometric-Linear Programming Model of the U. S. Petroleum Refining Industry
F. Gerard Adams and James M. Griffin
Some Aspects of the Aggregation Problem in the Dividend Earnings Relationship P. Michael Laub
A Synthesis of Time-Series and Cross-Section Analyses: Demand for Air Transportation Service Kan Hua Yüfung
Small-Sample Estimation of a Structural Equation with Autocorrelated Errors Michael D. Hurd
Comparison of the Small Sample Power of the Chi-Square and Likelihood Ratio Tests for Stochastic Models
Robert W. Lissitz
Significance Testing of the Spearman Rank Correlation Coefficient Jerrold H. Zar
Tables for Use of the Maximum F -Ratio in Multiple Comparison Procedures G. L. Tietjen and R. J. Beckman

Theory and Methods

- Design of Experiment of Bioassay R. K. Tsutakawa
A Kolmogorov Goodness-of-Fit Test for Discontinuous Distributions W. J. Conover
On the Selection of the Underlying Distribution and Adaptive Estimation
Robert V. Hogg, Vincent A. Uthoff, Ronald H. Randles and Alan S. Davenport
Grouping for Testing Trends in Categorical Data Robert J. Connor
A Method for Detecting All Defective Members in a Population by Group Testing F. K. Hwang
On the Chi-Square Test When the Parameters Are Estimated Independently of the Sample Gerald R. Chase
A Simple Algorithm for Generating Binomial Random Variables When N is Large Daniel A. Relles
Population Projection Variances and Path Analysis E. Senela
A Note on Simulating the Small-Sample Properties of Econometric Estimators W. M. Mikhail
The Bias of the Two-Stage Least Squares Estimator W. M. Mikhail
The Effect of Aggregation on Prediction in the Autoregressive Model Takeshi Ameniya and Roland Y. Wu
Estimation of Actual Response Coefficients in the Hildreth-Houck Random Coefficient Model W. E. Griffiths
Residual Correlations and Diagnostic Checking in Dynamic Disturbance Time Series Models David A. Pierce
 A -Minimax Estimation of a Multivariate Location Parameter Daniel L. Solomon
 A -Minimax Estimation of a Scale Parameter Daniel L. Solomon
The Estimation of Stationary Stochastic Regression Parameters Re-examined Barr Rosenberg
On a New Class of Bounds for the Distribution of Quadratic Forms in Normal Variates Leon Jay Gleser
Asymptotic Efficiency of One R -Factor Experiment Relative to R One-Factor Experiments or Selecting the
Best Normal Population V. S. Bawa
Relation Between Pearsonian Coefficients of Distributions of Least Squares Estimators and the Disturbance
Term P. N. Misra
Estimates of Parameters of a Censored Regression Sample Edwin H. Chen and W. J. Dixon
A Multivariate Extension of Tukey's One Degree of Freedom for Non-Additivity Lyman L. McDonald
Pooling Mean Squares in ANOVA Model II S. R. Srivastava
Power of Tests of Homogeneity of a Binomial Series T. K. M. Wisniewski
Allocation in Stratified Sampling as a Game Bence F. Swindel and David O. Yandle
Constructing Confidence Sets Using Rank Statistics David F. Bauer
Sequential Comparison of Exponential Survival Curves Norman Breslow and Charlene Haug
A Double Sampling Plan for Comparing Two Variances R. K. Zeigler and Aaron Goldman
Some Comparisons of the Method of Moments and the Method of Maximum Likelihood in Estimating Parameters
of a Mixture of Two Normal Densities W. Y. Tan and W. C. Chang
More Tables of the Power of the F Test M. L. Tiku

SOUTH AFRICAN STATISTICAL JOURNAL

Contents of Vol. 6, No. 1, 1970

Large Sample Maximum Likelihood Estimation in a Normal-Lognormal Distribution.....	<i>A. E. Crofts, Jr. and D. B. Owen</i>
Analysis of a Slippage Test for the Chisquared Distribution.....	<i>D. M. Hawkins</i>
Parametric Models for Point Processes.....	<i>H. Linhart and W. Zucchini</i>
On the Noncentral Distribution of a Certain Correlation Matrix.....	<i>D. G. Kabe</i>
An Asymptotic Distribution of Noncentral Multivariate Dirichlet Variates	<i>D. J. de Waal</i>
Specification of Stationary Point Processes by Product-Moment Densities	<i>V. W. Steinijsans</i>
Contributions to Normal Sampling Theory.....	<i>P. C. Du V. Oliver</i>
BOOK REVIEWS	
Summaries of Theses approved at South African Universities	

The South African Statistical Journal is the official journal of the South African Statistical Association. Annual subscription is R3,00 per volume consisting of two issues. All enquiries should be addressed to: The Treasurer, South African Statistical Journal, Department of Statistics, University of Pretoria, Pretoria, South Africa.

BIOMETRICS

Journal of the Biometric Society

Vol. 28, No. 3

CONTENTS

September 1972

Linear model analysis of categorical data with incomplete response vectors	<i>G. G. Koch, P. B. Imrey, and D. W. Reinfurt</i>
Some revised continuity corrections for discrete distributions.....	<i>W. R. Pirie and M. A. Hamdan</i>
Mixed quasi-independent models for categorical data.....	<i>M. H. Gail</i>
La theorie et le calcul des index de selection avec restrictions: synthese critique.....	<i>J. Mallard</i>
Adjustement automatique des densites de probabilite d'intervalles entre potentiels d'action selon la loi de Wiener.....	<i>J. Pernier</i>
Estimation of realized heritabilities from selection experiments. I. Divergent selection.....	<i>W. G. Hill</i>
Estimation of realized heritabilities from selection experiments. II. Selection in one direction.....	<i>W. G. Hill</i>
Determination of economic optima for crop-rotations.....	<i>G. E. Battese and W. A. Fuller</i>
On comparisons of sensitivity, specificity and predictive value of a number of diagnostic procedures	<i>B. M. Bennett</i>
A model of haemopoietic cell colony formation.....	<i>J. S. Maritz, E. R. Stanley, G. F. Yeo, and D. Metcalf</i>
Maximum likelihood estimation of the size distribution of liver cell nuclei from the observed distribution in a plane section.....	<i>N. Keiding and S. T. Jensen</i>
The reliability of a decision tree technique applied to psychiatric diagnosis	<i>S. Feldman, D. F. Klein, and G. Honigfeld</i>
A Bayesian approach to bioassay.....	<i>F. L. Ramsey</i>
Bayesian comparison of two ordered multinomial populations.....	<i>H. I. Weisberg</i>
NOTES	
Variance components of multiplicity estimators.....	<i>M. G. Sirken</i>
The distance distributions of a random point from randomly spaced lines.....	<i>F. H. C. Marriott</i>
On estimating relative potency from quadratic log-dose response relationships.....	<i>G. P. Cox</i>
Some distribution-free properties of the asymptotic variance of the Spearman estimator in bioassays	<i>P. C. Chang and E. A. Johnson</i>

Biometrics is published quarterly. Its objects are to describe and exemplify the use of mathematical and statistical methods in biological and related sciences in a form assimilable by experimenters. Inquiries should be addressed to: Biometrics Business Office, Department of Experimental Statistics, North Carolina State University, Raleigh, North Carolina 27607.

THE ANNALS OF MATHEMATICAL STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

Abstract. Each manuscript is required to contain an abstract, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of an abstract will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Abstract", followed by the title of the paper. Formulas should be used as sparingly as possible. The abstract should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classification. Primary—; Secondary—.

Key words and phrases:

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616-618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^{bc} and a_{bc} , respectively. Complicated-exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

[5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Math. Statist.* 9 60-62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews* Index to Volume 40, 1970, pp. 1683-1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Mathematical Statistics*. (For current address, see the latest issue of the *Annals*.)

Contents (Continued)

Weak laws of large numbers in normed linear spaces.....	ROBERT LEE TAYLOR	1267
Existence of limits in regenerative processes.....	DOUGLAS R. MILLER	1275
Limit theorems for sums of random variables defined on finite inhomogeneous Markov chains.....	HARRY COHN	1283
On embedding right continuous martingales in Brownian motion.....	ITREL MONROE	1293

Short Communications

Locally best invariant test for sphericity and the limiting distributions	NARIAKI SUGIURA	1312
Regression optimality of principal components.....	R. L. OBENCHAIN	1317
Sufficient statistics and discrete exponential families.....	J. L. DENNY	1320
A note on hyperadmissibility of estimators for finite populations.....	V. M. JOSHI	1323
Sampling distinguishable elements with replacement.....	JAN LANKE	1329
Designs with partial factorial balance.....	DONALD A. ANDERSON	1333
Balanced designs with unequal replications and unequal block sizes	A. C. KULSHRESHTHA, A. DEY AND G. M. SAHA	1342
On a randomized procedure for saturated fractional replicates in a 2^n -factorial	U. B. PAIK AND W. T. FEDERER	1346
On R. von Mises' condition for the domain of attraction of $\exp(-e^{-x})$	A. A. BALKEMA AND L. DE HAAN	1352
On weak convergence of extremal processes for random sample sizes	PRANAB KUMAR SEN	1355
Optimal stopping for partial sums ..	D. A. DARLING, T. LIGGETT AND H. M. TAYLOR	1363
Note on the tightness of the metric on the set of complete sub σ -algebras of a probability space.....	J. NEVEU	1369
Short proofs of two convergence theorems for conditional expectations	D. LANDERS AND L. ROGGE	1372
Convergence in distribution, convergence in probability and almost sure convergence of discrete martingales.....	DAVID GILAT	1374

Notes

Correction to "A remark on nonatomic measures"	K. P. S. BHASKARA RAO AND M. BHASKARA RAO	1380
Correction to "The weighted likelihood ratio, sharp hypotheses about chances, the order of a Markov chain".....	JAMES DICKEY AND B. P. LIENTZ	1380
