

THE MATHEMATICS AND STATISTICS SECTION
of the
NATIONAL REGISTER OF SCIENTIFIC
AND TECHNICAL PERSONNEL

Cooperating Societies:

American Mathematical Society
American Statistical Association
Association for Computing Machinery
Association for Symbolic Logic
Biometric Society
Econometric Society
Industrial Mathematics Society

The Institute of Mathematical Statistics
Mathematical Association of America
Operations Research Society of America
Society for Industrial and Applied
Mathematics
Society of Actuaries

The American Mathematical Society, at the request of the National Science Foundation, will mail the 1966 reporting forms to the Mathematical and Statistics Section of the National Register. The main objective of the National Register is to provide up-to-date information on the scientific manpower resources of the United States. It is also increasingly valuable to our profession as a source of statistical information.

When you receive a National Register Questionnaire, please fill it out and return it promptly to the Headquarters Offices of the Society at P. O. Box 6248, Providence, Rhode Island 02904.

Herbert E. Robbins
President, IMS

TEACHING POSITION AT THE
AMERICAN UNIVERSITY IN CAIRO

Ph.D. in Mathematics or Mathematical Statistics to teach undergraduate courses of mathematical statistics as well as general courses in Mathematics; encouraged to participate in research in solid state science. Position open September, 1966. Salary range \$5700 to \$10,000, dependent upon qualifications, plus 20 per cent end-of-service indemnity. Transportation, TIAA. Write Dean of the Faculties, The American University in Cairo, 113 Sh. Kasr El Aini, Cairo, UAR.

From the HOLDEN-DAY Library of Pure and Applied Science

Mathematical Foundations of the Calculus of Probability, by Jacques Neveu, *Faculté des Sciences de Paris. Trans. by Amiel Feinstein. 240 pp, (1965), \$9.50*

Develops the mathematical foundations of the theory of random processes to the point where the reader should have no difficulty in further pursuing the subject in any direction he chooses. The book would serve admirably for a course in advanced probability theory, as a textbook for a high-level course on measure theory, and as a self-study course for anyone who has had an elementary course on probability theory.

Selected Papers on Time Series Analysis, by Emanuel Parzen, Stanford University. *Paperbound. (Spring 1966), \$5.75**

This volume reprints, in their originally published form, 19 papers and 4 technical reports by Emanuel Parzen on time series analysis.

Stationary Random Processes, by Y. A. Rozanov, Steklov Mathematical Institute of the Academy of Sciences, Moscow. *Trans. by Amiel Feinstein. c. 200 pp, (Spring 1966), \$10.95*

The first book to give a systematic treatment of the prediction theory of multi-dimensional stationary random processes. With a number of topics concerning strictly stationary processes, not connected with prediction theory, it will provide a useful introductory text in a graduate-level course on stationary processes. Containing the most extensive and complete treatment of prediction theory to date, with detailed discussion of various cases arising frequently in applications, it will prove a valuable text for workers in the field.

Three new books for the mathematical statistician

AN INTRODUCTION TO PROBABILITY THEORY AND ITS APPLICATIONS. Vol. 2.

By WILLIAM FELLER. Includes a discussion of advanced probability, stochastic processes, and the application of these to many mathematical areas, such as analysis and partial differential equations. 1966. 626 pages. \$12.00

MATRIX ALGEBRA FOR THE BIOLOGICAL SCIENCES

(Including Applications in Statistics).

By S. R. SEARLE. Emphasizes the uses of matrix algebra, deals with problems in biology, biometry and biomathematics, develops concepts in sequence, considers real-life problems, and highlights computing formulae. 1966. 296 pages. \$9.95

ERGODIC THEORY AND INFORMATION.

By PATRICK BILLINGSLEY. Pure mathematics and its applications are the theme of this book. The author gives a rigorous treatment of ergodic theory and entropy with application to information theory and coding theory and other parts of mathematics. The study is illuminated by many examples and much intuitive material. 1965. 193 pages. \$8.50

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields; for example, reliability, quality control, experiments, surveys, queueing, congestion and forecasting. Approximately 500 journals are scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

Approximately 400 words long, these literary informative abstracts are written in English; the language of the original paper is indicated. The heading not only gives the name and address of the author together with the journal in which the paper was published, but a note is given of references, tables, etc.

The revised classification scheme consists of three parts. The pages of the journal are colour-tinted in groups to provide visual indication of twelve main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special table in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. When papers are concerned with new statistical tables the relevant classification for the Greenwood/Hartley Guide (1962) is indicated in a special section.

The abstracts are numbered serially, the volume number being inserted as a prefix. The journal is published four times a year and contains approximately 1,250 abstracts. Relevant indexes are published in each issue and combined in a yearly supplement.

<i>Annual Subscription</i>	£7.10s. (U. S. A. \$24.00)
<i>Single Number</i>	£2.5s. (U. S. A. \$4.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s.3d including postage and packing.

SOMMARIO—SUMMAIRE—CONTENTS—INHALT—SUMÁRIO

VITTORIO CASTELLANO. Corrado Gini. A Memoir
Bibliografia di Corrado Gini
CORRADO GINI. La dissomiglianza
CORRADO GINI. Di un'applicazione della transvariazione alla tassonomia (La regola del 75%)
LUIGI DE LUCIA. Variabilità superficiale e dissomiglianza tra distribuzioni semplici
GIUSEPPE LETI. Sull'entropia, su un indice del Gini e su altre misure dell'eterogeneità di un collettivo
GIORGIO DALL'AGLIO. Comportamento asintotico delle stime della differenza media e del rapporto di concentrazione
CARLO BENEDETTI. Un modo di eludere la scelta a priori della funzione di soddisfazione nella costruzione di un indice del costo della vita purtuttavia basato su criteri ottimali
A. R. KAMAT. Relationship between Widowhood and Expectation of life in a Stationary Population
GIUSEPPE LETI. Su alcune caratteristiche degli universi campionari ottenuti da popolazioni non transvarianti

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

Herbert E. Robbins, Department of Mathematical Statistics, Columbia University, New York, N.Y. 10027 (February 1, 1966—June 10, 1966: Department of Statistics, Purdue University, Lafayette, Indiana 47907)

President-Elect:

Theodore E. Harris, Department of Mathematics, University of Southern California, Los Angeles, California 90007

Executive Secretary:

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27515

Program Secretary:

Joan Raup Rosenblatt, National Bureau of Standards, Washington, D.C. 20234

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

D. L. Burkholder, Department of Mathematics, University of Illinois, Urbana, Illinois 61803

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are \$20.00 per year for residents of the United States or Canada and \$12.00 per year for residents of other countries. Special student rates are available at \$10.00 per year. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

Contents (Continued)

Probabilistic completion of a knockout tournament.....	J. A. HARTIGAN	495
Infinitely differentiable positive definite functions.....	C. C. GANSER	504
A family of combinatorial identities.....	LAWRENCE H. HARPER	509
Notes		
A note on the maximum sample excursions of stochastic approximation processes	HAROLD J. KUSHNER	513
On the mean duration of a ball and cell game; a first passage problem	HARRY DYM AND EUGENE M. LUKS	517
A note on limit theorems for the entropy of Markov chains.....	HARRY DYM	522
Some generalizations of distinct representatives with applications to statistical designs.....	HIRALAL AGRAWAL	525
Book Reviews		
N. U. PRABHU: <i>Queues and Inventories</i>	P. A. P. MORAN	529
NORMAN T. J. BAILEY: <i>The Elements of Stochastic Processes with Applications to the Natural Sciences</i>	CHARLOTTE STRIEBEL	531
J. M. HAMMERSLEY AND D. C. HADSCOMB: <i>Monte Carlo Methods</i> and YU. A. SHREIDER (ed.): <i>Methods of Statistical Testing/Monte Carlo Method</i>	MERVIN E. MULLER	532
Abstracts of Papers.....		539
News and Notices.....		556
Publications Received.....		564

MEETINGS OF THE INSTITUTE

TENTATIVE SCHEDULE

EASTERN REGIONAL - Upton, Long Island, N.Y. - April 27-29, 1966.
WESTERN REGIONAL - Los Angeles, California - August 15-17, 1966.
ANNUAL MEETING - New Brunswick, New Jersey - August 30-September 2, 1966.
EUROPEAN REGIONAL - London, England - September 5-10, 1966.

Abstracts should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
