## **INTRODUCTORY PROBABILITY AND STATISTICAL APPLICATIONS**

By PAUL L. MEYER, *Washington State University*

Assuming a calculus prerequisite, this one-semester text presents the basic ideas of probability and statistics emphasizing random variables. Employing an axiomatic approach, the emphasis is on practical applications, thus making the book of prime interest to engineers, physicists, those interested in the quantitative social sciences, and, in fact, anyone needing the subject as a tool.

*In Press*

## **PROBABILITY THEORY**

By KLAUS KRICKEBERG, *University of Heidelberg*

This book is essentially concerned with presenting the rigorous mathematical formulations of probability theory—along with many of the basic theorems—and provides an introduction to stochastic processes. Designed for students of some mathematical maturity—normally those in first year graduate work.

*In Press*

## **STUDIES IN THE THEORY OF RANDOM PROCESSES**

By A. V. SKOROKHOD

This monograph which treats certain aspects of the theory of stochastic processes will be of particular interest to serious students of probability and statistics. It requires a background of advanced probability and is specifically concerned with: stochastic integrals, and differential equations; construction of related Markov processes and the convergence processes.

*In Press*

## **GENERAL STOCHASTIC PROCESSES IN THE THEORY OF QUEUES**

By VÁCLAV E. BENEŠ, *Bell Telephone Laboratories*

Treats the topic of delays in queueing systems with one server, offers both a general rigorous mathematical theory, and an understandable and useful account of its applications. The book should prove valuable to both mathematicians and engineers because of the balance it strikes between the theoretical and the practical.

*88 pp, 6 illus, \$5.75*

## **INFERENCE AND DISPUTED AUTHORSHIP: THE FEDERALIST**

By FREDERICK MOSTELLER, *Harvard University*

DAVID L. WALLACE, *University of Chicago*

After an introduction to the historical problem and the data to be used, four parallel analyses are launched to provide a comparative study of methods of inference. These analyses include the extensive Bayesian study which uses high speed computation, a standard approach to discrimination, and two simplified approaches—one Bayesian and one using Bayesian ideas but not a Bayesian interpretation.

*368 pp, 12 illus, \$12.50*

## **From the HOLDEN-DAY Library of Science and Technology**

### **Basic Concepts of Probability and Statistics** by *J. L. Hodges, Jr. and E. L. Lehmann*

Explains the basic concepts of probability and statistics, assuming only a knowledge of high-school algebra, and illustrates them with a number of simple but important statistical techniques. Arrangement of the book is suitable for use either for a year-course or for a one-semester course emphasizing either probability or statistics.  
\$6.95

### **Stochastic Processes** by *Emanuel Parzen*

Provides an invaluable understanding of the use of stochastic processes for readers possessing a background of elementary calculus and some knowledge of the concepts of continuous probability theory. The book contains examples of a wide variety of empirical phenomena for which stochastic processes provide mathematical models, and introduces the methods of probability model building, emphasizing applications of stochastic processes.  
\$10.95

### **Mathematical Foundations of the Calculus of Probability** by *Jacques Neveu*

Develops the mathematical foundations of the theory of random processes to the point where the reader should have no difficulty in further pursuing the subject in any direction he chooses. The book would serve admirably for a course in advanced probability theory, as a textbook for a high-level course on measure theory, and as a self-study course for anyone who has had an elementary course in probability theory.  
\$7.95

## **STATISTICAL THEORY AND METHOD ABSTRACTS**

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields; for example, reliability, quality control, experiments, surveys, queueing, congestion and forecasting. Approximately 500 journals are scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

Approximately 400 words long, these literary informative abstracts are written in English; the language of the original paper is indicated. The heading not only gives the name and address of the author together with the journal in which the paper was published, but a note is given of references, tables, etc.

The revised classification scheme consists of three parts. The pages of the journal are colour-tinted in groups to provide visual indication of twelve main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special table in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. When papers are concerned with new statistical tables the relevant classification for the Greenwood/Hartley Guide (1962) is indicated in a special section.

The abstracts are numbered serially, the volume number being inserted as a prefix. The journal is published four times a year and contains approximately 1,150 abstracts. Relevant indexes are published in each issue and combined in a yearly supplement.

<i>Annual Subscription</i>	£4.10s. (U. S. A. \$24.00)
<i>Single Number</i>	£2.5s. (U. S. A. \$4.00)
<i>Loose Leaf Binders for Single Abstract Sheets</i>	16s.3d including postage and packing.

# THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

## OFFICERS

*President:*

Herbert Solomon, Department of Statistics, Stanford University, Stanford, California

*President-Elect:*

Herbert E. Robbins, Department of Mathematical Statistics, Columbia University, New York 27, N.Y.

*Executive Secretary:*

G. E. Nicholson, Jr., Department of Statistics, University of North Carolina, Chapel Hill, North Carolina

*Program Secretary:*

Dorothy Gilford, Office of Naval Research, Washington 25, D.C.

*Treasurer:*

George J. Resnikoff, Department of Statistics, California State College, Hayward, California

*Editor:*

D. L. Burkholder, Department of Mathematics, University of Illinois, Urbana, Illinois

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS OF MATHEMATICAL STATISTICS are \$15.00 per year for residents of the United States or Canada and \$7.00 per year for residents of other countries. There are special rates for students and for some other classes of members. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics*, and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

## MEETINGS OF THE INSTITUTE

### TENTATIVE SCHEDULE

**EASTERN REGIONAL—Tallahassee, Florida—April 29–May 1, 1965.**

**WESTERN REGIONAL—Berkeley, California—July 19–21, 1965.**

**ANNUAL MEETING—Philadelphia, Pennsylvania—September 8–11, 1965.**

**Abstracts** should be submitted in duplicate to the Managing Editor, P. L. Meyer, Department of Mathematics, Washington State University, Pullman, Washington, on abstract blanks which may be obtained from him or from any Secretary or Associate Secretary. Abstracts must be received at least 50 days before the first day of the meeting at which they are to be presented, indicating whether presented by title or in person. (Only one contributed paper may be given in person at any one meeting.) They may be printed prior to the publication of the report of the meeting. Ordinarily, each issue will contain those abstracts received at least 75 days before it appears. Abstracts should be limited to 200 words or the equivalent and should avoid displayed expressions and complicated formulae. They can be accepted from non-members of the IMS only if introduced by members. Abstracts must follow the stylistic requests on the abstract blank, or they may be returned.
