

THE ANNALS *of* MATHEMATICAL STATISTICS

FOUNDED AND EDITED BY H. C. CARVER, 1930-1933

EDITED BY S. S. WILKS, 1933-1949

THE OFFICIAL JOURNAL OF THE INSTITUTE
OF MATHEMATICAL STATISTICS

Contents

	PAGE
Distributions of Matrix Variates and Latent Roots Derived From Normal Samples	ALAN T. JAMES 475
Limit Theorems for the Maximum Term in Stationary Sequences	SIMMON M. BERMAN 502
Radon-Nikodym Derivatives of Stationary Gaussian Measures	JACK CAPON 517
On the Coefficient of Coherence for Weakly Stationary Stochastic Processes	L. H. KOOPMANS 532
Some Structure Theorems for Stationary Probability Measures on Finite State Sequences	CHARLES HOBBY AND N. DONALD YLVISAKER 550
Limit Distributions of a Branching Stochastic Process	HOWARD H. STRATTON, JR. AND HOWARD G. TUCKER 557
Some Theorems Concerning the Strong Law of Large Numbers for Non-Homogeneous Markov Chains	M. ROSENBLATT-ROTH 566
Comparison of Replacement Policies, and Renewal Theory Implications	RICHARD E. BARLOW AND FRANK PROSCHAN 577
A Continuous Kiefer-Wolfowitz Procedure for Random Processes	DAVID J. SAKRISON 590
On Pre-Emptive Resume Priority Queues	PETER D. WELCH 600
Graphical Methods for Internal Comparisons in Multiresponse Experiments	M. B. WILK AND R. GNANADESIKAN 613
Interactions in Multidimensional Contingency Tables	LEO A. GOODMAN 632
Maximum Likelihood Estimation With Incomplete Multivariate Data	IRENE MONAHAN TRAWINSKI AND R. E. BARGMANN 647
Applications of the Calculus for Factorial Arrangements II: Two Way Elimination of Heterogeneity	M. ZELEN AND W. FEDERER 658
Singular Weighing Designs	DAMARAJU RAGHAVARAO 673
Extended Group Divisible Partially Balanced Incomplete Block Designs	KLAUS HINKELMANN 681
Generalized Least Squares Estimators for Randomized Fractional Replication Designs	S. ZACKS 696
Orthogonality in Analysis of Variance	G. A. F. SEEBER 705
Estimates of Effects for Fractional Replicates	K. S. BANERJEE AND W. T. FEDERER 711
Simultaneous Confidence Intervals for Contrasts Among Multinomial Populations	LEO A. GOODMAN 716
Asymptotically Nonparametric Inference in Some Linear Models With One Observation per Cell	E. L. LEHMANN 726
A Characterization of Multisample Distribution-Free Statistics	C. B. BELL 735
Rankings From Paired Comparisons	W. A. THOMPSON, JR. AND RUSSELL REMAGE, JR. 739
Asymptotic Distribution of Distances Between Order Statistics From Bivariate Populations	O. P. SRIVASTAVA, W. L. HARKNESS AND J. B. BARTOO 748

(Continued on back cover)

Vol. 35, No. 2—June, 1964

THE ANNALS OF MATHEMATICAL STATISTICS

Subscription Rates. Current issues are \$20 per volume (four issues of one calendar year) in the U.S. and Canada, \$15 per volume elsewhere. Single issues are \$5.25. Back numbers for all issues up to and including 1956 (Vol. XXVII) are \$12 per volume, \$3.50 per issue; issues from 1957 on are \$20 per volume, \$5.25 per issue; for complete sets, \$200 for the first 25 volumes, \$10 per additional volume purchased at the same time as Volumes I through XXV.

Rates to members of the Institute of Mathematical Statistics are lower (see inside back cover).

Communications concerning subscriptions, back numbers, payment of dues, membership, changes of address, etc., should be addressed to Gerald Lieberman, Treasurer, Institute of Mathematical Statistics, Department of Statistics, Stanford University, Stanford, Calif.

Editorial Office, Department of Statistics, University of California, Berkeley 4, California. J. L. Hodges, Jr. Editor.

Preparation of manuscripts. Manuscripts should be submitted to the editorial office. Each manuscript should be typewritten, double spaced, with wide margins at sides, top, and bottom, and the original should be submitted with one additional copy, on paper that will take corrections. Dittoed or mimeographed papers are acceptable only if completely legible. Footnotes should be reduced to a minimum, and where possible replaced by remarks in the text, or bibliography at the end of the paper; formulae in footnotes should be avoided. References should follow the new style.

Figures, charts, and diagrams should be professionally drawn on plain white paper or tracing cloth in black India ink twice the size they are to be printed.

Authors are asked to keep in mind the typographical difficulties of complicated mathematical formulae. The difference between capital and lower-case letters should be clearly shown; care should be taken to avoid confusion between such pairs as zero and the letter O, the numeral 1 and the letter l, numeral 1 used as superscript and prime ('), alpha and a, kappa and k, mu and u, nu and v, eta and n, etc. Subscripts or superscripts should be clearly below or above the line. Bars above groups of letters (e.g., $\overline{\log x}$) and underlined letters (e.g., \underline{x}) are difficult to print and should be avoided. Symbols are automatically italicized by the printer and should not be underlined on manuscripts. Boldface letters may be indicated by underlining with a wavy line on the manuscript; boldface subscripts and superscripts are not available. Complicated exponentials should be represented with the symbol exp. In writing square roots the fractional exponent is preferable to the radical sign. Fractions *in the body of the text* (as opposed to displayed expressions) and fractions occurring in the numerators or denominators of fractions are preferably written with the solidus; thus $(a + b)/(c + d)$ rather than $\frac{a + b}{c + d}$, and ab/cd rather than $\frac{ab}{cd}$.

Authors will ordinarily receive only galley proofs. Fifty reprints without covers will be furnished free. Additional reprints and covers will be furnished at cost.

Mail to the *Annals of Mathematical Statistics* should be addressed to either the Editor or the Treasurer, as described above. It should not be addressed to Waverly Press.
