BIOMETRIKA

A Journal for the Statistical Study of Biological Problems

Volume XXXIV Contents Parts III and IV, 1947

I. On the distribution of the rank correlation coefficient τ when the variates are not independent. By W. Höffding. II. The significance of rank correlations where parental correlation exists. By H. E. Daniels and M. G. Kendall. III. Testing for normality. By R. C. Geary. IV. The stratified semi-stationary population. By S. Vajda. V. A simple approach to confounding and fractional replication in factorial experiments. By O. Kempthorne. VI. A comparison of stratified with unrestricted random sampling from a finite population. By P. Armitage. VII. Some theorems on time series. I. By P. A. P. Moran. VIII. Rank correlation between two variables, one of which is ranked, the other dichotomous. By J. W. Whitfield. IX. The variance of τ when both rankings contain ties. By M. G. Kendall. X. A χ^2 'smooth' test for goodness of fit. By F. N. David. XI. An exact test for the equality of variances. By R. L. Plackett. XII. The estimation from individual records of the relationship between dose and quantal response. By D. J. Finney. XIII. A power function for tests of randomness in a sequence of alternatives. By F. N. David. XIV. Approximation to percentage points of the z-distribution. By A. H. Carter. XV. A numerical solution of the problem of moments. By H. O. Hartley and S. H. Khamis.

The subscription price, *payable in advance*, is 45s. inland, 54s. export (per volume including postage). Cheques should be drawn to Biometrika and sent to "The Secretary, Biometrika Office, Department of Statistics, University College, London, W.C. 1." All foreign cheques must be in sterling and drawn on a bank having a London agency.

ECONOMETRICA

Journal of the Econometric Society

Contents of Vol. 15, No. 4, October, 1947, include:

Page

Max Sasuly: Irving Fisher and Social Science 255
Abraham Wald: Foundations of a General Theory of Sequential Decision Functions 279
J. R. Menke: Nuclear Fission as a Source of Power 314
Trygve Haavelmo: Family Expenditures and the Marginal Propensity to Consume 335
Bradford F. Kimball: A System of Life Tables for Physical Property Based on the Truncated Normal Distribution 342
Wassily Leontief: Introduction to a Theory of the Internal Structure of Functional Relationships 361
Maurice Fréchet: Anciens et nouveaux indices de corrélation: Errata 374
List of Members of the Econometric Society 383

Published Quarterly Subscription to nonmembers: $7.00 per year

The Econometric Society is an international society for the advancement of economic theory in its relation to statistics and mathematics.

Subscriptions to *Econometrica* and inquiries about the work of the Society and the procedure in applying for membership should be addressed to Alfred Cowles, Secretary and Treasurer, The Econometric Society, The University of Chicago, Chicago 37, Illinois.

Institute of Mathematical Statistics is collaborating with JSTOR to digitize, preserve, and extend access to *The Annals of Mathematical Statistics.* www.jstor.org

MATHEMATICAL REVIEWS

A journal containing reviews of the mathematical literature of the world, with full subject and author indices

Publication of this journal is sponsored by the American Mathematical Society, Mathematical Association of America, Institute of Mathematical Statistics, London Mathematical Society, Edinburgh Mathematical Society, Union Matematica Argentina, and others.

Subscriptions accepted to cover the calendar year only.
Issues appear monthly except July. $13.00 per year.

Send subscription order or request for sample copy to

Announcing . . .

INDUSTRIAL EXPERIMENTATION

By K. A. BROWNLEE, M.A.

Those who must apply critical tests of statistical significance in practice, often without a full knowledge of their theoretical background, will find this volume particularly useful.

The book is a guide to both the planning and interpretation of experiments on an industrial scale and paves the way to efficient quality control.

CONTENTS

Introduction. Fundamental Statistical Conceptions. Significance of Means. The Comparison of Variances. The χ^2 Test. The Poisson Distribution. The Analysis of Variance. The Quality Control Chart. The Relation Between Two Variables. Multiple Correlation. The General Analysis of Variance. Miscellaneous Aspects of the Analysis of Variance. Balanced Incomplete Blocks. Confounding: The Problem of Restricted Block Size in Factorial Experiments. General Conclusions.

116 Pages — $2.85

SANKHYĀ

The Indian Journal of Statistics

Edited by P. C. Mahalanobis

VOL. 8, PART 2, 1947

Mathematical Theory of the Symmetrical Factorial Design.....R. C. BOSE

Parametric Relations in Multivariate Distributions.....P. K. BOSE

A Mathematical Set-up Leading to Analysis of a Class of Designs.....H. K. NANDI

A Note on Critical Angles between Two Flats in Hyperspace with Certain Statistical Applications.....S. N. ROY

Miscellaneous Notes:

On Statistical Test of Treatment Effect on Certain Diseases.....M. N. GHOSH and S. N. ROY

World War II and the Consumption Pattern of the Calcutta Middleclass S. BHATTACHARYYA

Annual subscription: 20 rupees (or 32 shillings)
Inquiries and orders may be addressed to the Editor,
Sankhyā, Presidency College, Calcutta, India.

THE THEORY OF EXPERIMENTAL INFERENCE

By C. West Churchman

Treating the general problem of inference in the experimental sciences, this book makes full use of the contribution to this problem by the mathematical statisticians, considering those of Pearson and Neyman and the further generalization of Wald.

This book is outstanding in its

- thorough treatment of the logic of statistical inference
- examination of historical philosophic schools on the problem of methods in the sciences.
- treatment of the relationship between progressive aims of science, and the methods of science.

To be published this summer.
$3.50 (probable)

C. WEST CHURCHMAN is Assistant Professor of Philosophy at the University of Pennsylvania.

THE FOURIER TRANSFORMS OF PROBABILITY DISTRIBUTIONS

Lectures by

AUREL WINTNER

Professor of Mathematics,
The Johns Hopkins University

CONTENTS

Distributions, Transforms, Moments, Convolutions, Convergent Convolutions, Convergence in Measure, Semi-Groups, Inversions, Examples, Projections.

iv + 185 pp. 4°. Litho-printed by Edwards Brothers. Copies may be secured from the author. Price $3.00, payable in advance.

Two Recent books in the Wiley Mathematical Statistics Series

Walter A. Shewhart, Editor

INTRODUCTION TO MATHEMATICAL STATISTICS

by **PAUL G. HOEL,** *Associate Professor of Mathematics, University of California at Los Angeles.*

"I have gone over carefully this scholarly piece of work, and I believe it to be a genuine contribution in the field. The language of description is definitely devoid of that abstruseness which usually accompanies treatments in this area, and the illustrations are 'down to earth.' " —PROFESSOR HARRY L. STEIN, *University of Manitoba*

". . . it sets an entirely new standard of mathematical and statistical competence for textbooks on intermediate mathematical statistics."
—J. H. CURTISS, *National Bureau of Standards*

1947 **256 pages** **$3.50**

SEQUENTIAL ANALYSIS

by **ABRAHAM WALD,** *Professor and Head of the Department of Mathematical Statistics, Columbia University.*

"The Sequential Analysis marks the greatest advance in statistical theory in recent years and I have no doubt that Wald's book will be a great success."
—PROFESSOR WILLIAM FELLER, *Cornell University*

"In the reviewer's opinion this book is very useful and valuable and should be possessed and digested by every teacher of statistics and by every professional statistician . . . the book is well and clearly written and may be read and understood by those who have had no advanced mathematical training." —FRANK M. WEIDA, *Science Magazine*

1947 **212 pages** **$4.00**

For accuracy, speed, ease of operation . . .

NOMOGRAPHY

by **ALEXANDER S. LEVENS,** *Associate Professor of Mechanical Engineering, University of California at Berkeley.*

Nomograms are used widely for their ease of operation and for the time saved in the repeated solution of mathematical formulas.

Nomography stresses the geometric method used in the development of the theory of the design of alignment charts involving three or more variables. Simpler equations are solved by alignment charts consisting of straight line scales. Once the theory has been presented thoroughly, practical short cuts are given to reduce the time required to design a chart. The professional man will find no trouble handling the material in this book, which requires only a knowledge of elementary algebra, plane geometry and logarithms.

1948 **176 pages** **$3.00**

JOHN WILEY & SONS, Inc. **440 Fourth Ave., New York 16, N. Y.**

McGraw-Hill Presents

SAMPLING INSPECTION

Principles, Procedures, and Tables for Single,
Double, and Sequential Sampling in
Acceptance Inspection and Quality Control
Based on Percent Defective

By the Statistical Research Group
Columbia University

Applied Mathematics Panel, Office of Scientific
Research and Development
395 pages, 6 x 9. $5.25

The elementary concepts of acceptance sampling are carefully treated, a standard sampling-inspection plan is supplied, and detailed instructions are given so that the principles developed and plans supplied can be used for practical inspection of industrial products. Much of the material has not previously been published.

TECHNIQUES OF STATISTICAL ANALYSIS

For Scientific and Industrial Research
and Production and Management Engineering

By the Statistical Research Group
Columbia University

Applied Mathematics Panel, Office of Scientific
Research and Development
473 pages, 6 x 9. $6.00

This book discusses a series of problems which occur frequently in planning, analyzing, or interpreting quantitative data, and explains various techniques appropriate to these problems. It describes the statistical approach to a problem, expounds the theory that can be brought to bear upon it, points out the features of the problem that determines the relevance of the theory, gives detailed computational procedures, and illustrates the interpretation of the results.

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

BOARD OF DIRECTORS FOR 1948

President:

A. WALD, Columbia University, New York 27

Vice-Presidents:

CHURCHILL EISENHART, National Bureau of Standards, Washington 25

HENRY SCHEFFÉ, University of California, Los Angeles 24

Secretary-Treasurer:

PAUL S. DWYER, University of Michigan, Ann Arbor

Past Presidents:

WILL FELLER, Cornell University, Ithaca, N. Y.

WILLIAM G. COCHRAN, North Carolina State College, Raleigh

Editor:

S. S. WILKS, Princeton University, Princeton, N. J.

The purpose of the Institute of Mathematical Statistics is to stimulate research in the mathematical theory of statistics and to promote coöperation between the field of pure research and the fields of application.

Membership dues including subscription to the ANNALS OF MATHEMATICAL STATISTICS are $7.00 per year within the Western Hemisphere and $5.00 per year elsewhere. Dues and inquiries regarding membership in the Institute should be sent to the Secretary-Treasurer of the Institute.

MEETINGS OF THE INSTITUTE

NEW YORK CITY, April 14–15, 1948

Abstracts must be in the hands of Assistant Secretary S. B. Littauer, Department of Industrial Engineering, Columbia University, New York 27, N. Y., not later than April 3.

BERKELEY, June 22–25, 1948

Abstracts must be in the hands of Assistant Secretary, IMS, Statistical Laboratory, University of California, Berkeley 4, Calif., not later than June 12.

SUMMER MEETING—MADISON, WISCONSIN, September 6–10, 1948

Abstracts must be in the hands of Secretary P. S. Dwyer, Rackham Building, Ann Arbor, Michigan, not later than July 26.

ANNUAL MEETING—CLEVELAND, OHIO, December 27–30, 1948

Abstracts must be in the hands of Secretary P. S. Dwyer, Rackham Building, Ann Arbor, Michigan, not later than November 15.
