Empirical Processes by Peter Gaenssler

This volume is mainly concerned with Glivenko-Cantelli results for empirical measures and with functional Central Limit Theorems for empirical C-processes. Specifically, the functional Central Limit Theorems assume independent, identically distributed observations in arbitrary sample spaces and are derived using a general theory of weak convergence for non-Borel measures on a metric space. This theory, initiated by R.M. Dudley and further studied by M.J. Wichura, is developed here in full and in a context that leads to a broad unification and simplification of previous methods for obtaining functional Central Limit Theorems. The approach applies to results beginning with Donsker's famous theorem for the uniform empirical process up to the most general cases known today.

The basic point of view of this volume is probabilistic, but it is hoped that the presentation, with its set-indexed context, might also lead to new approaches to inference for spatial data.

The main topics covered are as follows:

Glivenko-Cantelli convergence

The Vapnik-Chervonenkis Theory with some extensions

Weak convergence of non-Borel measures on a metric space

Portmanteau Theorem

Continuous mapping theorems

Product spaces

Sequential compactness

Skorokhod-Dudley-Wichura Representation Theorem

The space $D[0, 1]$

Random change of time

Functional Central Limit Theorems

For empirical C-processes

For weighted empirical processes

The Annual Index to the Statistical
Literature of the World

CURRENT INDEX TO STATISTICS

APPLICATIONS, METHODS AND THEORY

VOLUME 9 (1983)–NOW AVAILABLE

- Nearly 7200 articles from “core” and “related” journals and books indexed for 1983.
- Complete coverage of 59 journals in statistics and related fields.
- Statistics articles selected and indexed from over 300 other journals.
- Subject index lists each article alphabetically according to each *important word* in its title.
- Subject index also lists articles alphabetically according to *key words* not appearing in the title.
- Author index lists each article under the name of each author.
- Reasonable prices:

IMS/ASA Members	— \$15
Other individuals	— \$20
Other institutions	— \$40

Published jointly by the Institute of Mathematical Statistics and the American Statistical Association. Volumes 2-9 are available now at the above prices. Publication of Volume 10 (1984) is expected late in 1985. Orders for Volume 10 are now being accepted at the above prices, with shipping upon availability. Please specify applicable rate and volume number(s) desired. Order prepaid from:

No. 3

Special Invited Paper

Testing for independence in a two-way table: New interpretations of the chi-square statistic	PERSI DIACONIS AND BRADLEY EFRON
Discussion	NORMAN BRESLOW AND DIRK MOORE
Discussion	JAMES M. DICKEY
Discussion	STEPHEN E. FEINBERG
Discussion	I. J. GOOD
Discussion	LEO A. GOODMAN
Discussion	TOM LEONARD
Discussion	PETER MCCULLAGH AND DARYL PREGIBON
Discussion	DONALD A. PIERCE
Discussion	R. L. PLACKETT
Discussion	ROLF SUNDBERG
Rejoinder	PERSI DIACONIS AND BRADLEY EFRON

Articles

Using empirical partially Bayes inference for increased efficiency ...	BRUCE G. LINDSAY
Strong consistency of approximate maximum likelihood estimators with application in nonparametrics	JANE-LING WANG
Consistency and asymptotic normality of the minimum logit chi-squared estimator when the number of design points is large	LINDA JUNE DAVIS
Consistent estimation in partially observed random walks	PETER GUTTORP AND ANDREW F. SPIEGEL
Spline smoothing and optimal rates of convergence in nonparametric regression models	PAUL SPECKMAN
Spline smoothing in regression models and asymptotic efficiency in L_2	MICHAEL NUSSBAUM
A sieve method for the spectral density	YUN-SHYONG CHOW AND ULF GRENANDER
An asymptotically efficient solution to the bandwidth problem of kernel density estimation	JAMES STEPHEN MARRON
Averaged shifted histograms: Effective nonparametric density estimators in several dimensions	DAVID W. SCOTT
A note on the L_1 consistency of variable kernel estimates	LUC DEVROYE
Kernel estimates of the tail index of a distribution	SANDOR CSÖRGÖ, PAUL DEHEUVELS, AND DAVID MASON
Minimax variance M -estimators in ϵ -contamination models	JOHN R. COLLINS AND DOUGLAS P. WIENS
Estimation of a symmetric distribution	SHAW-HWA LO
Estimating a quantile of a symmetric distribution	ARTHUR COHEN, SHAW-HWA LO, AND KESAR SINGH
A Bayesian nonparametric sequential test for the mean of a population	MURRAY K. CLAYTON
Sobolev tests for independence of directions	P. E. JUPP AND B. D. SPURR
Linear serial rank tests for randomness against ARMA alternatives	MARC HALLIN, JEAN-FRANCOIS INGENBLEEK AND MADAN L. PURI
Nonnull and optimality robustness of some tests	TAKEAKI KARIYA AND BIMAL KUMAR SINGH
Modeling expert judgments for Bayesian updating	CHRISTIAN GENEST AND MARK J. SCHERVISH

Short Communications

Optimal sequential search: A Bayesian approach	DAVID ASSAF AND SHMUEL ZAMIR
Rate of convergence of one- and two-step M -estimators with applications to maximum likelihood and Pitman estimators	P. JANSSEN, J. JUREČKOVÁ AND N. VERAVEBEKE
Variances of the Kaplan-Meier estimator and its quantiles under certain fixed censoring models	ARTHUR J. ROTH
A measure of variability based on the harmonic mean, and its use in approximations	MARK BROWN
Coherent predictions are strategic	DAVID A. LANE AND WILLIAM D. SUDDERTH

Correction

A conjecture of Berry regarding a Bernoulli two-armed bandit	V. M. JOSHI

IMS LECTURE NOTES — MONOGRAPH SERIES

This series provides an avenue for the rapid, but carefully refereed, publication of important research results in comprehensive form and expository style. These volumes should be of great value to researchers and advanced students in statistics, probability, and related fields. The series editor is Shanti S. Gupta, Purdue University.

4 ZONAL POLYNOMIALS

by Akimichi Takemura, Purdue University

A self-contained development of zonal polynomials in the framework of standard multivariate analysis.

Zonal polynomials have been used extensively in the study of noncentral multivariate distributions.

This easily understood treatment uses only the standard tools of linear algebra and multivariate normal distribution theory.

110 pages
List price \$15
IMS members \$9

5 INEQUALITIES IN STATISTICS AND PROBABILITY

edited by Y.L. Tong, University of Nebraska

Proceedings of the Symposium on Inequalities in Statistics and Probability held in Lincoln, Nebraska during October 1982.

This volume reports on the recent rapid growth in the field of inequalities due, in part, to widespread applications in reliability theory, in multivariate nonnormal analysis, and in optimization and constraint problems.

The volume contains thirty expository and research papers by leaders in the field.

263 pages
List price \$25
IMS members \$15

6 THE LIKELIHOOD PRINCIPLE

by James Berger and Robert Wolpert

A comprehensive presentation and criticism of the likelihood principle and its generalizations.

This book provides a non-technical development of the likelihood principle with attention to some of its surprising implications for such areas as randomization analysis, censoring, significance testing, and sequential analysis. The authors also discuss generalizations and implementations of the likelihood principle.

217 pages
List price \$25
IMS members \$15

& ADDITIONAL TITLES

Previously published: Volume 1, *Essays on the Prediction Process* by Frank Knight (\$15/members \$9); Volume 2, *Survival Analysis* edited by John Crowley and Richard A. Johnson (\$25/members \$15); Volume 3, *Empirical Processes* by Peter Gaenssler (\$20/members \$12). Forthcoming: *Group Theory in Statistics* by P. Diaconis, *Approximate Computations of Expectations* by C. Stein, and *Foundations of Exponential Families* by L. Brown.

Prepaid orders for individual volumes and requests for standing order enrollment (eligible for 20% prepublication discounts from list prices) should be sent to
