

THE ANNALS of PROBABILITY

AN OFFICIAL JOURNAL OF
THE INSTITUTE OF MATHEMATICAL STATISTICS

Special Invited Paper

- Boundary value problems and sharp inequalities for martingale transforms
D. L. BURKHOLDER 647

Articles

- Synonymity, generalized martingales, and subfiltrations DOUGLAS N. HOOVER 703
Two operational characterizations of cooptional times MARTIN JACOBSEN 714
Convergence and existence of random set distributions TOMMY NORBERG 726
Almost sure equiconvergence of conditional expectations H. G. MUKERJEE 733
Equilibrium fluctuations of stochastic particle systems: the role of conserved
quantities TH. BROX AND H. ROST 742
The hydrodynamical behavior of the coupled branching process ANDREAS GREVEN 760
Sanov property, generalized I -projection and a conditional limit theorem I. CSISZÁR 768
Normal approximations to sums of scores based on occupancy numbers
M. P. QUINE AND J. ROBINSON 794
Runs in m -dependent sequences SVANTE JANSON 805
Trivariate density of Brownian motion, its local and occupational times,
with application to stochastic control IOANNIS KARATZAS AND STEVEN E. SHREVE 819
Temps de sejour et oscillation du mouvement Brownien au voisinage de la
sphere Euclidienne A. GOLDMAN 829
Bad rates of convergence for the central limit theorem in Hilbert space
WANSOO RHEE AND MICHEL TALAGRAND 843
On the law of large numbers in 2-uniformly smooth Banach spaces BERNARD HEINKEL 851
Additive processes on nuclear spaces A. S. USTUNEL 858
Exponential approximations for two classes of aging distributions
MARK BROWN AND GUANGPING GE 869
Approximations to optimal stopping rules for exponential random variables
ADAM T. MARTINEK 876
A unified approach to a class of best choice problems with an unknown
number of options F. THOMAS BRUSS 882
Asymptotic Bayesian estimation of a first order equation with small
diffusion OMAR HIJAB 890

Short communications

- Convexity and large deviations PETER NEY 903
The finite mean LIL bounds are sharp MICHAEL J. KLASS 907
An example on the central limit theorem for associated sequences NORBERT HERRNDORF 912
On the convergence of spectral densities of arrays of weakly stationary
processes M. FALK 918
Randomly started signals with white noise BURGESS DAVIS AND ITREL MONROE 922

Correction

- Correction to "High density limit theorems for infinite systems of unscaled
branching Brownian motions" LUIS G. GOROSTIZA 926

Vol. 12, No. 3—August 1984

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

OFFICERS

President:

Ingram Olkin, Department of Statistics, Sequoia Hall, Stanford University, Stanford, California 94305

President-Elect:

Oscar Kempthorne, Department of Statistics, Iowa State University, Ames, Iowa 50011

Past-President:

Patrick Billingsley, Department of Statistics, University of Chicago, Chicago, Illinois 60637

Executive Secretary:

Kjell Doksum, Department of Statistics, University of California, Berkeley, California 94720

Treasurer:

Bruce E. Trumbo, Department of Statistics, California State University, Hayward, California 94542

Please send correspondence to: IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545

Program Secretary:

Richard A. Johnson, Department of Statistics, University of Wisconsin, 1210 West Dayton St., Madison, Wisconsin 53706

Editor: *The Annals of Statistics*

Michael D. Perlman, Department of Statistics, GN-22, University of Washington, Seattle, Washington 98195

Editor: *The Annals of Probability*

Harry Kesten, Department of Mathematics, Cornell University, Ithaca, N.Y. 14853

Editor: *The IMS Bulletin*

William C. Guenther, Department of Statistics, University of Wyoming. *Send correspondence to:* Box 3332, University Station, Laramie, Wyoming 82071

Editor: *The IMS Lecture Notes—Monograph Series*

Shanti S. Gupta, Department of Statistics, Purdue University, West Lafayette, Indiana 47907

Managing Editor:

Prem K. Goel, Department of Statistics, The Ohio State University, Columbus, Ohio 43210

Official Journals. The official journals of the Institute are *The Annals of Statistics*, *The Annals of Probability*, and *The Institute of Mathematical Statistics Bulletin*.

Individual and Institutional Memberships. All *individual members* receive the *Bulletin*. Annual dues for individual membership depend upon the journals selected (\$52 for both *Annals*/\$40 for one *Annals*). Dues allocations to each journal are set by Council resolution for regular members at \$6 for *The IMS Bulletin* and \$34 for one *Annals* or \$23 for each *Annals*. Subject to some restrictions, memberships are available at reduced rates for students (\$21/\$17), residents of developing countries (\$35/\$28), and retired members (\$11/\$6/\$1 for the *Bulletin* only). *Institutional memberships* are available at \$200 per year and include two copies for multiple readership of all three journals.

Individual and General Subscriptions. Subscriptions are available on a calendar year basis. *Individual subscriptions* are for the personal use of the subscriber and must be in the name of, paid directly by, and mailed to an individual. Individual subscriptions for 1984 are available to *The Annals of Statistics* (\$45), *The Annals of Probability* (\$45), and *The IMS Bulletin* (\$11).

General subscriptions are for libraries, institutions, and any multiple-readership use. General subscriptions for 1984 are available to *The Annals of Statistics* (\$66), *The Annals of Probability* (\$62), and *The IMS Bulletin* (\$20). Air mail rates for overseas delivery of general subscriptions are quoted upon request.

Correspondence. Mail to IMS should be sent to the Business Office (membership, subscriptions, claims, copyright permissions, advertising, back issues), the Editor of the appropriate journal (submissions, editorial content), or the Managing Editor (production), and *not* to Waverly Press.

***The Annals of Probability* (ISSN 0091-1798)**, Volume 12, Number 3, August, 1984. Published in February, May, August and November by the Institute of Mathematical Statistics, 3401 Investment Blvd., #6, Hayward, California 94545. Printed at the Waverly Press, Inc., Baltimore, Maryland 21202. Second-class postage paid at Hayward, California and at additional mailing offices. **Postmaster.** Send address changes to *The Annals of Probability*, Institute of Mathematical Statistics, 3401 Investment Blvd., #6, Hayward, California 94545.

EDITORIAL POLICY

The main purpose of the *Annals of Probability* and the *Annals of Statistics* is to publish contributions to the theory of probability and statistics and to their applications. The emphasis is on importance and interest; formal novelty and mathematical correctness alone are not sufficient. Especially appropriate are authoritative expository papers and surveys of areas in vigorous development. All papers are refereed.

THE ANNALS OF PROBABILITY

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Probability*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will not normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. This title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law," depending on the emphasis to be conveyed.

Summary. Each manuscript is required to contain a summary which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of a summary will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Summary," followed by the title of the paper. Formulas should be used as sparingly as possible. The summary should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1980 subject classifications. Primary —; Secondary—. Key words and phrases.

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use in the *Mathematical Reviews Annual Subject Index-1980*. The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

Identification of Symbols. Manuscripts for publication should be clearly prepared to insure that all symbols are properly identified. Distinguish between "oh" and "zero"; "ell" and "one"; "epsilon" and "element of"; "kappa" and "kay," etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics. Acronyms should be introduced sparingly.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent;

thus, $(a + b)/(c + d)$ is preferred to $\frac{a + b}{c + d}$, and

$(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are

preferred to a^{bc} and a_{bc} , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

- [5] Doob, J. L. (1944). The elementary Gaussian processes. *Ann. Math. Statist.* **15** 229–282.

In textual material, the format "... Doob (1944) ..." is normally preferred to "... Doob [5] ..." Multiple references can be distinguished as "... Doob (1944a) ...". Abbreviations for journals should be taken from a current index issue of *Mathematical Reviews*.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Probability*. (For current address, see the latest issue of the *Annals*.)
