Vol. 23

August 1995

No. 4

Articles

- Explicit limit results for minimal sufficient statistics and maximum likelihood estimators in some Markov processes: Exponential families approach
VALERI T. STEFANOV
- Asymptotically efficient estimation in semiparametric generalized linear models
HUNG CHEN
- Prediction functions for categorical panel data . . . ZVI GILULA AND SHELBY J. HABERMAN
- A geometric combination estimator for d -dimensional ordinal sparse contingency tables JIANPING DONG AND JEFFREY S. SIMONOFF
- Convergence of the iterative proportional fitting procedure LUDGER RÜSCHENDORF
- Splines as local smoothers. DOUGLAS NYCHKA
- Asymptotics for the transformation kernel density estimator
OLA HÖSSJER AND DAVID RUPPERT
- Some projection properties of orthogonal arrays CHING-SHUI CHENG
- An optimum design for estimating the first derivative
ROY V. ERICKSON, VÁCLAV FABIAN AND JAN MAŘÍK
- Optimal designs for identifying the degree of a polynomial regression . . HOLGER DETTE
- A study of least squares and maximum likelihood for image reconstruction in positron emission tomography FINBARR O'SULLIVAN
- Asymptotic iterated bootstrap confidence intervals
STEPHEN M. S. LEE AND G. ALASTAIR YOUNG
- On the asymptotic behaviour of the moving block bootstrap for normalized sums of heavy-tail random variables S. N. LAHIRI
- A robust surveillance scheme for stochastically ordered alternatives
LOUIS GORDON AND MOSHE POLLAK
- Sequential nonparametric estimation with assigned risk SAM EFROMOVICH
- A general classification rule for probability measures
SANJEEV R. KULKARNI AND OFER ZEITOUNI
- A new general method for constructing confidence sets in arbitrary dimensions: With applications A. DASGUPTA, J. K. GHOSH AND M. M. ZEN
- Robustness of standard confidence intervals for location parameters under departure from normality SANJIB BASU AND ANIRBAN DASGUPTA

CHANGE-POINT PROBLEMS

edited by E. Carlstein, H. G. Mueller and D. Siegmund

Change-point analysis is a rapidly growing area with applications ranging from edge detection in image analysis to DNA sequence comparison to clinical trials and industrial quality control. Based on the AMS-IMS-SIAM Summer Research Conference on "Change-point Problems" at Mount Holyoke College, this volume contains 28 papers covering a wide range of change-point problems and theory.

385 pages; list price \$45; IMS members \$26

Volume 24

MULTIVARIATE ANALYSIS AND ITS APPLICATIONS

edited by T. W. Anderson, K. T. Fang and I. Olkin

This volume, based on an International Symposium held at Hong Kong Baptist College in 1992, presents work of many major figures in the theory of Multivariate Analysis and highlights important recent trends in applications. The volume includes 35 research articles and four longer articles summarizing short courses by T. W. Anderson, W. S. Cleveland, I. Olkin and Y.L.

Tong, readers will find useful discussions of recent theoretical results in optimality, characterization and majorization. Applied topics include correspondence analysis, nonparametric regression, projection pursuit, structural equations and quantization.

472 pages; list price \$45; IMS members \$26

Volume 25

ADAPTIVE DESIGNS

edited by Nancy Flournoy and William F. Rosenberger

Because of the logic of adapting treatment allocation rules to the results of past experience, scientists and engineers repeatedly create and implement such strategies. Motivated by the desire to improve the efficiency of information acquisition or to limit exposure when the consequences of such exposure become evident, adaptive designs have a long history of popularity in practice. Advances in computational capabilities and in statistical theory for dependent observations have contributed to a resurgence of theoretical development in this area. This volume contains 20 papers whose topics include two-arm clinical trials, adaptive dose-response designs for quantile estimation and maximizing survival in the presence of opposing hazard functions, linear models, multinomial models, quality control and group testing.

296 pages; list price \$40; IMS members \$24

Higher Order Asymptotics

by Jayanta K. Ghosh

These lecture notes are concerned with Edgeworth expansions, higher order efficiency, expansion of posterior, probability matching priors and related topics. The lectures were originally presented at the NSF-CBMS Regional Conference held at Chapel Hill, North Carolina, in August 1991.

Contents

Introduction

Edgeworth Expansions, Curved Exponentials, and Fisher Consistent Estimates

Third Order Efficiency for Curved Exponentials

Curvature and Information Loss

Expansion of Posterior, Bayes Estimate and Bayes Risk

Third Order Efficiency, Admissibility, and Minimality

Small Sample Efficiency

Magic Formula, Bartlett Correction, and Matching Probabilities

Noninformative Priors

The New Likelihoods and the Neyman-Scott Problems

Bibliography

Pages viii+110

List price\$25
