“If it weren’t for IMS Members’ Life Insurance, I’d be underinsured... by thousands of dollars!”

“...With the future I have planned—marriage, a home, a family—my company policy just wouldn’t be enough. So I bought low-cost term life insurance through my membership.”

Starting a personal insurance program when you’re young and healthy is smart, because it’s easier to qualify. For a low cash outlay, your program is off to a good start. And even though rates go up as you get older, they are still affordable because of our group’s buying power.

Further, should you change jobs—as long

as you remain a member—your group term life insurance goes with you...everywhere.

Are you underinsured? Think about your future. Then, to build up your insurance program, call or write the Administrator.

**UP TO \$240,000 IN
TERM LIFE INSURANCE PROTECTION IS
AVAILABLE TO IMS MEMBERS.**

IMS LECTURE NOTES — MONOGRAPH SERIES

This series provides an avenue for the rapid, but carefully refereed, publication of important research results in comprehensive form and expository style. These volumes should be of great value to researchers and advanced students in statistics, probability, and related fields. The series editor is Shanti S. Gupta, Purdue University.

4

ZONAL POLYNOMIALS

by Akimichi Takemura, Purdue University

A self-contained development of zonal polynomials in the framework of standard multivariate analysis.

Zonal polynomials have been used extensively in the study of noncentral multivariate distributions.

This easily understood treatment uses only the standard tools of linear algebra and multivariate normal distribution theory.

110 pages
List price \$15
IMS members \$9

5

INEQUALITIES IN STATISTICS AND PROBABILITY

edited by Y.L. Tong, University of Nebraska

Proceedings of the Symposium on Inequalities in Statistics and Probability held in Lincoln, Nebraska during October 1982.

This volume reports on the recent rapid growth in the field of inequalities due, in part, to widespread applications in reliability theory, in multivariate nonnormal analysis, and in optimization and constraint problems.

The volume contains thirty expository and research papers by leaders in the field.

263 pages
List price \$25
IMS members \$15

6

THE LIKELIHOOD PRINCIPLE

by James Berger and Robert Wolpert

A comprehensive presentation and criticism of the likelihood principle and its generalizations.

This book provides a non-technical development of the likelihood principle with attention to some of its surprising implications for such areas as randomization analysis, censoring, significance testing, and sequential analysis. The authors also discuss generalizations and implementations of the likelihood principle.

217 pages
List price \$25

&

ADDITIONAL TITLES

Previously published: Volume 1, *Essays on the Prediction Process* by Frank Knight (\$15/members \$9); Volume 2, *Survival Analysis* edited by John Crowley and Richard A. Johnson (\$25/members \$15); Volume 3, *Empirical Processes* by Peter Gaenssler (\$20/members \$12). Forthcoming: *Group Theory in Statistics* by P. Diaconis, *Approximate Computations of Expectations* by C. Stein, and *Foundations of Exponential Families* by L. Brown.

Prepaid orders for individual volumes and requests for standing order enrollment (eligible for 20% prepublication discounts from list prices) should be sent to

THE ANNALS OF PROBABILITY

Vol. 13

November 1985

No. 4

Special Invited Paper

White noise calculus and nonlinear filtering theory

G. KALLIANPUR AND R. L. KARANDIKAR

Articles

Occupation times for critical branching brownian motions

J. THEODORE COX AND DAVID GRIFFEATH

The coupled branching process in random environment A. GREVEN

Laws of the iterated logarithm for time changed brownian motion with an application

to branching processes R. M. HUGGINS

Asymptotic growth of controlled Galton–Watson processes P. KÜSTER

A Martingale approach to supercritical (CMJ) branching processes HARRY COHN

Some structure results for martingales in the limit and pramarts MICHEL TALAGRAND

Recurrent sets for transient Lévy processes with bounded kernels STEVEN J. JANKE

On the distribution of first passage and return times for small sets ROBERT COGBURN

The optional sampling theorem for processes indexed by a partially ordered set

HARRY E. HÜRZELER

Critical phenomena in sequence matching

RICHARD ARRATIA AND MICHAEL S. WATERMAN

On continuum percolation PETER HALL

Scaling limits for associated random measures ROBERT BURTON AND ED WAYMIRE

An improved subadditive ergodic theorem THOMAS M. LIGGETT

On complete convergence in the law of large numbers for subsequences ALLAN GUT

The strong ergodic theorem for densities: generalized Shannon–McMillan–Breiman

theorem ANDREW R. BARRON

An invariance principle for ϕ -mixing sequences MAGDA PELIGRAD

On the central limit question under absolute regularity RICHARD C. BRADLEY

On limiting distributions of order statistics with variable ranks from stationary

sequences SHIHONG CHENG

Identifiability of continuous mixtures of unknown gaussian distributions

C. BRUNI AND G. KOCH

Short Communications

Domination of last exit distributions MING LIAO

The smallest eigenvalue of a large dimensional Wishart matrix JACK W. SILVERSTEIN

The Robbins–Siegmund series criterion for partial maxima MICHAEL J. KLASS

Multivariate distributions with uniformly distributed projections GIDEON SCHWARZ

The concept of normality for fuzzy random variables

MADAN L. PURI AND DAN A. RALESCU

contents (continued)

Short Communications

Optimal sequential search: A Bayesian approach	DAVID ASSAF AND SHMUEL ZAMIR	1213
Rate of convergence of one- and two-step M-estimators with applications to maximum likelihood and Pitman estimators	P. JANSSEN, J. JUREČKOVÁ, AND N. VERAVERBEKE	1222
Variances of the Kaplan-Meier estimator and its quantiles under certain fixed censoring models	ARTHUR J. ROTH	1230
A measure of variability based on the harmonic mean, and its use in approximations	MARK BROWN	1239
Coherent predictions are strategic	DAVID A. LANE AND WILLIAM D. SUDDERTH	1244

Correction

A conjecture of Berry regarding a Bernoulli two-armed bandit	V. M. JOSHI	1249
