# NEW ANALYTIC GEOMETRY

By **PERCEY F. SMITH**, Yale University

and

**ARTHUR S. GALE**, The University of Rochester

An adequate and thorough preparation for the calculus and for applied mathematics. The book contains a large number of tables to assist in calculation and the proofs are simple and direct. Special attention is paid to the curve plotting. The parabola, the ellipse and hyperbola are given concise treatment. The variety of locus problems is large and the use of parametric equations in solving them and in curve plotting is emphasized.
