Mathematical Philosophy

*A STUDY
OF FATE AND
FREEDOM*

By **CASSIUS J. KEYSER, Ph.D., LL.D.**

Adrain Professor of Mathematics in Columbia University

THESE "Lectures for Educated Laymen" aim at democratizing science and scientific criticism. They show that the *greatest* of mathematical ideas—the pillar-concepts of the science—belong no more to mathematics than to *all* science and to rational thought in general. The great pillar-concepts are explained in the simplest terms. The reader need not be a mathematical specialist. These lectures are not addressed primarily to mathematical technicians. They are designed for students and teachers whether of mathematics, or philosophy, or engineering, or psychology, or logic, or education, or sociology, or art, or natural science, and for all other students, thinkers, and critics who own allegiance to the *laws of thought* and who desire to gain a fair understanding of the nature, the spirit, the standards, and the bearings of the science which Plato called divine. **Price \$4.70.**
