INSTRUCTIONS TO AUTHORS

A. General

Papers submitted for publication may be written in English, French or German.

Manuscripts must be in their final form, typed on one side of each sheet only, with double spacing and wide margins. Formulae should be typewritten whenever possible. Mimeographed copies are not acceptable unless clearly legible.

Please include a “Note for the Printer” explaining markings used. See suggestion overleaf.

To speed up publication, authors will receive only one set of proofs: provisionally numbered page proofs. Authors are requested to correct typographical errors only; they will be charged for corrections involving changes, additions or deletions to the original manuscript.

Diagrams should be submitted on separate sheets, not included in the text. They should be drawn in Indian ink in clean uniform lines, the whole about twice the size of the finished illustration. Inscriptions should allow for the figure 1, for example, to be about 2 mm high in the final version (i.e. 4 mm for reduction $\times \frac{1}{2}$). The author should mark in the margin of the manuscript where diagrams may be inserted.

Footnotes, other than those which refer to the title heading, should be numbered consecutively and placed at the foot of the page to which they refer (not at the end of the article).

Please give on the first page of the manuscript a running head (condensed title), which should not exceed 70 letters including spaces.

References to the literature should be listed at the end of the manuscript. The following information should be provided for journal articles: names and initials of all authors, name of the journal, volume, first and last page numbers and year of publication. References to books should include name(s) of author(s), full title, edition, place of publication, publisher and year of publication.

Examples

B. Marking

1. Text

The words "Theorem", "Lemma", "Corollary", "Proposition" etc. are normally printed in **boldface**, followed by the formulation in italics (to be underlined in the manuscript). The words "Proof", "Remark", "Definition", "Note" etc. are printed in **italics** with the formulation in ordinary typeface.

Words or sentences to be set in italics should be marked by single underlining.

2. Formulae

Letters in formulae are normally printed in italics, figures in ordinary typeface.

It will help the printer if in doubtful cases the position of indices and exponents is marked thus: \( b_i, a^y \). Spacing of indices and exponents must be specially indicated \( (A_{^m\sqrt{n}}) \) otherwise they will be set \( (A_{\sqrt{m^p}}) \).

Underlining for special alphabets and typefaces should be done according to the following code:

- **single underlining:** small letter
- **double underlining:** capital letter
- **brown:** boldface headings, boldface letters in formulae
- **yellow:** upright
- **red:** Greek
- **blue:** Gothic
- **green:** Script
- **violet:** the numeral 1, and zero (to distinguish them from the small letter 1 and the capital letter O)

The following are frequently confused:

- **double underlining:**
  - brown:
  - yellow:
  - red:
  - blue:
  - green:
  - violet:

Please take care to distinguish them in some way.

C. Examples

1. Special alphabets or typefaces

<table>
<thead>

Quasielastic Neutron Scattering for the Investigation of Diffusive Motions in Solids and Liquids

By Professor Dr. Tasso Springer, Institut für Festkörperforschung der Kernforschungs-anlage Jülich

With 36 figures. II, 100 pages. 1972
(Springer Tracts in Modern Physics/Ergebnisse der exakten Naturwissenschaften, Vol. 64)
Cloth DM 38,—

Contents:

SPRINGER TRACTS IN MODERN PHYSICS
occupy an intermediate position somewhere between a journal and a progress report. It is the object of this series to provide concise accounts of new developments in all areas of physics.
Communications in
Mathematical Physics
Volume 30 · Number 4 · 1973

Contents
Carter, B.: Elastic Perturbation Theory in General Relativity and a
Variation Principle for a Rotating Solid Star 261
Rühl, W.: Field Representations of the Conformal Group with Con-
tinuous Mass Spectrum 287
