

devoted to reporting on
all of modern physics...

Zeitschrift für Physik

Zeitschrift für Physik A Atomic Nuclei

ISSN 0340-2193 Title No. 218

Editor-in-Chief: B. Povh, Heidelberg

Zeitschrift für Physik A is devoted to original research in experimental and theoretical nuclear physics, elementary particle physics relevant to nuclear phenomena and new developments in the interdisciplinary research originating in these fields.

With the advent of new electron and heavy ion accelerators operating at high energies, experimental and theoretical papers from these fields will become an important part of *Zeitschrift für Physik A* in the future. The editors would like to attract contributions in hadron physics, both experimental and theoretical. New technical developments in nuclear physics, e.g. storage rings for ions, open up interdisciplinary research in atomic, plasma, and nuclear physics. In the initial stages, at least, during which the experimental methods dominate the field, authors should have the opportunity to publish their work in one and the same journal. *Zeitschrift für Physik A*.

Zeitschrift für Physik C Particles and Fields

ISSN 0170-9739 Title No 288

Editor-in-Chief: G. Kramer, Hamburg

Zeitschrift für Physik C, Particles and Fields, is devoted to the experimental and theoretical investigations of elementary particles. In view of the steadily growing interplay of theory and experiment in this field, particular emphasis is given to a clear and complete presentation or research.

Fields of interest: Experimental and theoretical particle physics; structure of elementary particles; high energy processes; strong, electromagnetic and weak interactions; symmetry principles; quantum field theory; field theory on the lattice

Condensed Zeitschrift für Physik B Matter

ISSN 0722-3277 Title No 257

Managing Editors: H. Horner, Heidelberg, **F. Steglich,** Darmstadt

Editor for Rapid Notes: P. Fulde, Stuttgart

Section B covers the physics of condensed matter and general physics. In this section papers on the physical properties of crystalline, disordered, and amorphous solids, and on classical and quantum liquids will be published. Examples would be papers on superconductivity, phase transitions, surface effects, and studies of dynamic process performed with the help of photon, electron, or neutron scattering. Emphasis is also put on quantum optics and statistical physics, especially in the area of nonequilibrium processes and cooperative phenomena. Papers on molecular physics that relate to problems of condensed matter are also invited.

For more than sixty years, this world-renowned research journal has been dedicated to reporting important developments in modern physics. In order to better serve the physics community and maintain its own high standards, the journal is divided into four sections. Each section is self-contained and may be ordered separately. All four sections are published in English.

All parts of

Zeitschrift für Physik

- publish rapidly in English (within three months of a manuscript being accepted)
- accept full-length papers and short notes
- collect no page charges and offer authors fifty free reprints per article
- feature special issues and invited progress reports to focus attention on areas of particular current interest
- are recognized by the European Physical Society

Atoms, Molecules Zeitschrift für Physik D and Clusters

ISSN 0178-7683 Title No. 460

Editor-in-Chief: I. V. Hertel, Freiburg

The focus of the new *section D* will be on free atoms, molecules, and clusters and their properties and interactions as individual entities in gaseous, liquid, and solid environments. All aspects of atomic, molecular, and cluster structure, spectroscopy, interactions, dynamics, production, fragmentation, and ionization will be covered. Other topics to be included heavy-ion atomic physics, muonic, pionic, and other exotic atoms, hyperfine interactions, electron and positron scattering; collisions and experiment and theory; structure and stability calculations; statistical and dynamic theories of inter- and intramolecular processes
