

Now available from A K Peters, Ltd.

The Association for Symbolic Logic, in cooperation with A K Peters, Ltd., publishes books in logic. These titles include textbooks, research monographs, treatises for a broader audience, historical and biographical writings, as well as the highly regarded series *Lecture Notes in Logic*. New publications, as well as reprints of selected previous volumes, are available from A K Peters, Ltd.

Model Theory of Stochastic Processes

Lecture Notes in Logic, 14

H. Jerome Keisler, Sergio Fajardo

2002, Hardcover; ISBN: 1-56881-167-5; 148 pp; \$70.00

ASL member price: \$56.00

2002, Paperback; ISBN: 1-56881-172-1; 148 pp; \$32.00

ASL member price: \$26.00

This monograph presents new research in probability theory using ideas from mathematical logic. It is a general study of stochastic processes on adapted probability spaces, employing the concept of similarity of stochastic processes based on the notion of adapted distribution. The authors use ideas from model theory and methods from nonstandard analysis. The construction of spaces with certain richness properties, defined by insights from model theory, becomes easy using nonstandard methods, but remains difficult or impossible without them. The book is accessible to researchers in probability, model theory, and nonstandard analysis.

Reflections on the Foundations of Mathematics:

Essays in Honor of Solomon Feferman

Lecture Notes in Logic 15

Wilfried Sieg, Richard Sommer, Carolyn Talcott, editors

2002, Hardcover; ISBN: 1-56881-169-1; 456 pp; \$95.00

ASL member price: \$76.00

2002, Paperback; ISBN: 1-56881-170-5; 456 pp; \$45.00

ASL member price: \$36.00

Solomon Feferman has shaped the field of foundational research for nearly half a century. These papers, most of which were presented at the symposium honoring him at his 70th birthday, reflect his broad interests as well as his approach to foundational research, which places the solution of mathematical and philosophical problems at the top of the agenda. The contributions range from historical to technical to philosophical topics, with emphasis on proof theory and computational aspects.
