CONTENTS

Peano's smart children: A provability logical study of systems with built-in consistency. By Albert Visser .............................. 161

The Boolean spectrum of an o-minimal theory.
   By Charles Steinhorn and Carlo Toffalori .......................... 197

Modularity and relevant logic. By James Garson ......................... 207

Monadic II1-theories of II1-properties. By Kees Doets ................ 224

Combinators and categorial grammar. By Peter Simons .................. 241

Isomorphic but not lower base-isomorphic cylindric algebras of finite dimension. By Balázs Bíró ................................. 262

Set mappings on Dedekind sets. By Norbert Brunner ...................... 268

Models for modal syllogisms. By Fred Johnson ............................ 271

Some compactness results for modal logic. By George F. Schumm .... 285

Łeśniewski's strategy and modal logic. By John T. Kearns .............. 291

Book Review: Non-well-founded sets, by Peter Aczel.
   Reviewer R. Hinnion ........................................ 308
