

CONTENTS

A – ALGEBRA AND NUMBER THEORY

S. Diaz, <i>Space curves that intersect often</i>	263
---	-----

B – ANALYSIS

T. Fack and H. Kosaki, <i>Generalized s-numbers of τ-measurable operators</i>	269
K. H. Hofmann and K. Strambach, <i>Lie's fundamental theorems for local analytical loops</i>	301
J. S. Howland, <i>On the Kato-Rosenblum theorem</i>	329
A. V. Noell, <i>Peak points in boundaries not of finite type</i>	385
W. C. Ramey, <i>Averaging properties of pluriharmonic boundary values</i>	407
T. J. Ransford, <i>On the range of an analytic multivalued function</i>	421
C. D. Sogge, <i>On restriction theorems of maximal-type</i>	441
E. J. Straube, <i>Orthogonal projections onto subspaces of the harmonic Bergman space</i>	465
T. I. Vogel, <i>Asymptotic behavior of two semi-linear elliptic free boundary problems</i>	477

D – GEOMETRY

F. Knüppel and E. Salow, <i>Plane elliptic geometry over rings</i>	337
--	-----

G – TOPOLOGY

D. J. Anick, <i>A loop space whose homology has torsion of all orders</i>	257
W. J. Ralph, <i>An extension of singular homology to Banach algebras</i>	391
E. Spanier, <i>Cohomology with supports</i>	447

Our subject classifications are: A – ALGEBRA AND NUMBER THEORY; B – ANALYSIS;
C – APPLIED MATHEMATICS; D – GEOMETRY; E – LOGIC AND FOUNDATIONS;
F – PROBABILITY AND STATISTICS; G – TOPOLOGY; H – COMBINATORICS
