CONTENTS

EDITORIAL MESSAGES	1
CONFERENCE ANNOUNCEMENTS	2
CONFERENCE REPORTS	6
Table of Contents	8
RESEARCH ARTICLES	
Liu Genqian The dual of the Henstock-Kurzweil space	105
Shusheng Fu On some theorems in fractional calculus for singular functions	122
H. Joyce Conditions for equality of Hausdorff and packing measures on \mathbb{R}^n	142
Miklós Laczkovich and Imre Z. Ruzsa Measure of sumsets and ejective sets I	153
Jan Malý The Darboux property for gradients	167
Isidore Fleischer A Vitali-like convergence theorem for the Henstock integral	174
Aleksander B. Kharazishvili On selectors nonmeasurable with respect to quasiinvariant measures	177
E. Russell Love Integration of Fourier-Legendre series	184
T. H. Steele Towards a characterization of ω -limit sets for Lipschitz functions	201
M. Crnjac, B. Guljaš and H. I. Miller A positive answer to a question about the Cantor set	213
P. Holický, J. Malý, L. Zajíček, C. Weil A note on the gradient problem	225
William D. L. Appling A characterization theorem for the existence of a Hellinger-type integral	236
Thomas S. Salisbury and Juris Steprāns Hausdorff capacity and Lebesgue measure	265
Harvey Rosen On characterizing extendable connectivity functions by associated sets	279
Dariusz Banaszewski Universally bad Darboux functions in the class of additive functions	284
Richard C. Brown, Don B. Hinton and Alois Kufner Sufficient conditions for three weight sum inequalities in Lebesgue spaces	292
Benedetto Bongiorno, Luisa Di Piazza and Valentin Skvortsov On continuous major and minor functions for the n -dimensional Perron integral	318
Ján Borsík Sums of quasicontinuous functions defined on pseudometrizable spaces	328
Martin Dindoš Limits of transfinite convergent sequences of derivatives	338

INROADS

Chris Freiling and Robert W. Vallin	
Simultaneous recovery of Baire one functions	346
Thierry De Pauw	
A concept of generalized absolute continuity for the \mathcal{F} -integral	350
Valeriu Popa and Takashi Noiri	
On upper and lower β -continuous multifunctions	362
Lu Shipan	
Notes on the approximately continuous Henstock integral	377
Lee Tuo-Yeong, Chew Tuan-Seng and Lee Peng Yee	
On Henstock integrability in Euclidean spaces	382
D. N. Sarkhel and Rudolf Vyborny	
A change of variables theorem for the Riemann integral	390
S. M. Mazhar	
Some remarks on absolute summability methods	396
Javier Fernández de Bobadilla de Olazabal	
A monotone C^1 function and a Riemann integrable function whose composition is not Riemann integrable	404
Andrzej Nowik	
Remarks about a transitive version of perfectly meager sets	406
Loukas Grafakos	
Linear truncations of the Hilbert transform	413
Krzysztof Ciesielski and Marcin Szyszkowski	
A symmetrically continuous function which is not countably continuous	428
Cheng-Ming Lee	
Kubota's AD-integral is more general than Burkill's AP-integral	433
Richard G. Gibson	
Concerning a characterization of continuity	437
