

CONTENTS

The reduced theory of quadratic forms
 By RON BROWN AND MURRAY MARSHALL 161

Disfocality and nonoscillatory solutions of n th order differential
 equations
 By W.J. JIM 177

Class field theory summarized
 By DENNIS GARBANTI 195

A singular nonlinear boundary value problem
 By J.C. KURTZ 227

Strengthened maximal functions and pointwise convergence in R^N
 By RICHARD J. BAGBY 243

Amenable groups for which very topologically left invariant
 mean is right invariant
 By PAUL MILNES 261

Inequalities for the generalized transfinite diameter
 By BURNETT MEYER 267

Generalized continuous and hypercontinuous lattices
 By G. GIERZ AND J.D. LAWSON 271

Subordinations for typically-real and related functions
 By R.B. BYERS AND E.P. MERKES 297

Tangent bundle connections and the geodesic flow
 By CARMEN C. CHICONE 305

Examples of fixed point free maps from cells onto larger
 cells and spheres
 By SAM B. NADLER, JR. 319

Countable unions of O -dimensional decompositions
 By J.W. LAMOREAUX 327

A note on algebras between L^∞ and H^∞
 By CARL SUNDBERG 333
