Call for Papers

Special Issue of *Studia Logica* on Natural Deduction Proof Systems

Most automated deduction systems are based on representations and procedures that are suitable for efficient execution, but not for direct communication with a human user. This special issue of *Studia Logica* will be devoted to papers concerned with proof search, transformation, and presentation using systems of natural deduction. Suitable topics include:

- Systems of natural deduction for classical, intuitionistic, modal, linear and other logics or type theories and their properties
- Automated proof search procedures based on natural deduction
- Presentation and transformation of proofs in natural deduction and related formats
- Educational applications

Deadline for submission is AUGUST 15, 1996.

Submitted papers must be in English and describe original research which has not previously been published in a refereed journal. Papers which cannot appear in the special issue will be considered for subsequent publication in a regular issue of *Studia Logica*.

Studia Logica publishes articles in general logic and on applications of logic to other fields, like philosophy of language, cognitive science, and artificial intelligence. The distinctive feature of *Studia Logica* is its series of monothematic issues devoted to important topics of contemporary logic.

Please send complete papers electronically in PostScript format (preferred) or hardcopy to one of the guest editors of this special issue.

MODERN LOGIC PUBLISHING

MLP BOOKS

If you know van Heijenoort only, or even primarily, as the editor of *From Frege to Gödel* . . . , if you care about the history of logic, . . . you'll want to read

. . .

Irving H. Anellis, *Van Heijenoort: Logic and Its History in the Work and Writings of Jean van Heijenoort*

Pbk: \$39.95 (ISBN 1-884905-00-5) ; Hbk: \$59.95 (ISBN 1-884905-01-3)

. . . and learn the full range of van Heijenoort's work and thoughts on the history of logic and his contributions to contemporary logic.

Jean van Heijenoort (1912 – 1986) was best known as a historian of logic and was most recognized for his influential anthology *From Frege to Gödel* collecting many of the research papers that shaped the early history of mathematical logic. His own contributions to mathematical logic, especially to the falsifiability tree method, hitherto generally unknown, are detailed here by van Heijenoort's last doctoral student.

Anellis discusses van Heijenoort's academic life and scholarly career. His central themes are van Heijenoort's contributions to mathematical logic and to the study of its history. He uses van Heijenoort's publications, classroom lectures, and unpublished notes and manuscripts to detail these. Also covered are van Heijenoort's education, his development as a teacher, logician and historian of logic, and his views on philosophy of logic and mathematics.

Comments:

. . . About the book:

"This volume is certainly a major contribution to the quickly developing historiography of modern logic, full of information, both important and rare, for the logician, the historian and the philosopher of logic, and even for mathematicians and philosophers at large." – Ignacio ANGELELLI (University of Texas at Austin), *Mathematical Reviews* **96a**, MR #96a: 03001.

. . . About the author:

"Anellis is certainly not only qualified for writing it but also a natural choice to do so." – Michael RESNIK (University of North Carolina)

MODERN LOGIC PUBLISHING
MLP BOOKS

*Secondary Studies in the Nineteenth-century History of
Algebraic Logic and Universal Algebra:
An Electronic Bibliography*

Compiled by Members of the *Modern Logic* Editorial Board

AN INDISPENSIBLE RESEARCH TOOL. Up-to-date through its publication date of January 1995, this bibliography, compiled over five years by members of the editorial board of *Modern Logic* with the assistance of specialists in the history of algebraic logic, provides information on bibliographies and approximately 1400 nineteenth- and twentieth-century expository and secondary literature on the history of algebraic logic and universal algebra, covering the earliest developments of the "symbolical algebra" of the the British Analyst school of the 1820s through the 1920s. Inaccessible and little-known studies by major and minor figures are listed alongside of well-known studies by historians of logic as well as by original contributors to the algebraic tradition and cover all aspects of the history of algebraic logic and universal algebra, including considerations of the influences and interactions between the algebraic and function-theoretic traditions. The bibliography may be searched by author, AMS (MOS) subject classifications, and by key words.

When ordering software, please specify whether diskettes should be formatted for Macintosh or PC platforms, whether diskettes should be 5.25 or 3.5, doublesided double density or high density. The file can be formatted for most major DOS or Macintosh wordprocessing applications.

MODERN LOGIC PUBLISHING

Modern Logic Calendar – 1996

*A Calendar Celebrating the Lives of Logicians and Contributors
to the Growth and Development of Modern Mathematical Logic*

A BEST-SELLER! Our 1994 and 1995 calendars sold out in just weeks.

The aim of these calendars is to provide informative and interesting facts and amusing factoids about logicians, their lives and works. The secret agenda of the calendars is to spark interest in the history of logic.

The yearly Modern Logic Calendars are up-dated each year, as new information is obtained on logicians and others who have contributed to the growth and development of mathematical logic. In addition to listing the birth and death dates of logicians, known and not well known, one logician is selected each month, on the anniversary of his or her birth for a one-page “calendar biosketch”. For logicians whose life and work are little known, the biosketch presents a succinct summary of their major contributions and an outline of their life. For major figures about whom much is known, the biosketch may contain interesting vignettes or obscure information that is not ordinarily included in scholarly biographies. Historians of logic who specialize in the work of the monthly honorees contribute the biosketches.

Each year’s calendar is guaranteed to be absolutely unique!

Biosketch honorees for the 1996 calendar include Paul Bernays, George Boole, Alonzo Church, D. P. Gorskii, Robin O. Gandy, Alfred Bray Kempe, Stanisław Leśniewski, Guiseppe Peano, Richard Whately, S. A. Yanovskaya, and Max Zorn.

Price: was \$9 each. Now 55% off at \$4 each *while supplies last*.

Forthcoming July 1996 (tent.)

ALEXEI G. BARABASHEV, *Long Cycles in the History of Mathematics*

(English translation by Gregory D. Crowe)

Volume 1: Russian Philosophy and History of Logic, Mathematics and Science Series; ISBN 1-884905-02-1 ; paperback; Price: \$ 29.95 (tent.); (*tentative price guaranteed as pre-publication sale price on all orders received by 1 July 1996*).

A much enlarged and revised translation of the author's book *Dialektika razvitiya matematicheskogo znaniya*. Gregory Crowe's translation will give readers an appreciation for the acuity and depth of the author's perception, the philosophical profundity of his analyses, and his broad knowledge of the history of mathematics. In the process of developing his thesis, Barabashev has arrived at philosophical insights and conclusions which will contribute significantly to discussions on the philosophy of the history of mathematics. Some of these insights will be absolutely new to philosophers of mathematics, especially those who are unable to avail themselves of the author's writings in Russian. Other of these insights will appear vaguely familiar to readers; but they will discover that this familiarity derives from a close similarity between the conclusions reached by Barabashev and those recently reached independently, but only after Barabashev had already done so, by Western writers in philosophy of mathematics who have only recently begun to approach their subject historically.

Gregory Crowe is preparing to defend his doctoral thesis on history of technology at Harvard University. He worked in close cooperation with the author to produce this translation.

FRED SEDDON, *Aristotle and Łukasiewicz on the
Principle of Contradiction*

(With a biographical sketch of Jan Łukasiewicz by Jan Woleński)

ISBN 1-884905-04-8 (paperback) ; Price: \$ 25.95 (tent.); (*tentative price guaranteed as pre-publication sale price on all orders received by 1 July 1996*).

The author presents a section-by-section evaluation of Łukasiewicz's analysis of Aristotle's treatment of the Principle of Contradiction, as this was presented in Wedin's English translation of Łukasiewicz's famed article "Über den Satz der Widerspruchs bei Aristoteles."

"The author's task is to analyze the principle of contradiction in Aristotle through the glasses of Jan Łukasiewicz. The book makes several interesting points. In particular, the author compares various views on the topic being analyzed as well as various translations of Aristotle's related writings. Perhaps the most interesting fragment concerns Łukasiewicz's criticism of Aristotle's proofs. The author correctly points out that Łukasiewicz confuses here two meanings of "proof", and that his criticism of the Stagirite's arguments for the principle of contradiction is unjustified. . . . Also one must agree with the author's criticism of Łukasiewicz's view that the principle of contradiction is psychological rather than logical." — Jan Woleński (Jagiellonian University)

MLP BOOKS

Planned:

- V. Ja. PERMINOV, *The Problem of the Justification of Mathematics from the Philosophical Point of View*

Volume 2: Russian Philosophy and History of Logic,
Mathematics and Science Series

“This is a very interesting book on the philosophy of mathematics, promoting a down-to-earth view regarding mathematics, which mean . . . to look not only at the well-known results . . . , but also at mathematics as an age-old successful scientific activity of men. . . . The book reads very well and is thought-provoking.” — from comments on the Russian original in *Mathematical Reviews* #88d:03007.

- Ioannis M. VANDOULAKIS, *The Formation of Mathematics in Greek Antiquity*
