CIS CUMULATIVE DATA BASE
1992 Edition

A Computer-Readable Bibliography of the

Based on the Current Index to Statistics
A joint venture of the Institute of Mathematical Statistics
and the American Statistical Association

The 1991 Edition (1978–90) is currently in use at more than 70 university libraries, statistics and mathematics
departments, government agencies, and corporations.

With appropriate retrieval software, the 1992 edition offers students, faculty, and staff at your site . . .

♦ Fast and easy literature searches based on author, title, and key words and phrases.
♦ Access to over 130,000 articles on probability and statistics published during the past 17 years.
♦ Printed lists of references retrieved.
♦ No long distance, connection time, or item retrieval charges.
♦ Also includes articles from IMS journals published in 1960–1974 as contained in the Cumulative Index
to IMS Scientific Journals.

Total file length for the 1992 edition is approximately 18 MB, supplied on 3.5” high density microdiskettes in MS-DOS
format. No retrieval software is supplied by CIS, but “shareware” for a variety of installations is available from current
users. For copies of license agreements and technical information, contact the IMS Business Office at the address
below, telephone (510) 783-8141, FAX 783-4131, or e-mail IMS@UCDAVIS.BITNET or IMS@UCDAVIS.EDU.

PRICES

You may make the data base available to users at your site through an unlimited number of stations (computers or terminals).

No more than four stations at an academic department or corporate research group. (No federal agency orders.)

“PERSONAL” LICENSE: First Year or Any Update, $90.
Personal use by an individual IMS or ASA member on one computer. (Paid from personal funds; shipped to home address.)

Deadline Date: Orders must be received at the IMS Business Office by July 15, 1992; shipment is
scheduled for late July. (Orders must include signed license agreements and full payment in U.S. funds
through a U.S. bank; institutions, please allow time for local processing.) Any copies ordered after the
deadline date will be manufactured in small lots, will incur an additional $50 charge, and will be shipped
when available.

Direct all orders to: IMS Business Office
3401 Investment Boulevard, Suite 7, Hayward, CA 94545, USA
D. Basu's emphasis has always been on foundations and underlying concepts rather than on technicalities. In keeping with his philosophy, essays in this festschrift volume, dedicated to Basu on the occasion of his 65th birthday, place the major emphasis on the foundational issues of statistical inference. Most of the papers in this volume are review articles written by his friends and colleagues in those areas of statistics that have interested Basu most during his active research career—information, likelihood, ancillarity, randomization, fiducial probabilities, logical foundations of survey sampling, and many related concepts. These papers are also written in a narrative style which has typified so much of Basu’s own writings in statistics.

Contents

Conditional inference from confidence sets by G. Casella; Intervention experiments, randomization and inference by O. Kempthorne; Ancillarity by E. L. Lehmann & F. W. Scholz; The Pitman closeness of statistical estimators: Latent years and the renaissance by P. K. Sen; Unbiased sequential binomial estimation by Bimal K. Sinha & Bikas K. Sinha; Sufficiency by S. Yamada & H. Morimoto; Foundations of statistical quality control by R. E. Barlow & T. Z. Irony; Prequential data analysis by A. P. Dawid; Bayesian nonparametric inference by T. S. Ferguson, E. G. Phadia, & R. C. Tiwari; Hierarchical and empirical Bayes multivariate estimation by M. Ghosh; Basu’s contributions to the foundations of sample survey by G. Meeden; Survey sampling—As I understand it by V. P. Godambe; Two basic partial orderings for distributions derived from Schur functions and majorization by K. Joag-Dev & J. Sethuraman; Optimal integration of surveys by P. K. Pathak & M. Fahimi; The model based (prediction) approach to finite population sampling theory by R. M. Royall; Sampling theory using experimental design concepts by J. Srivastava & Z. Ouyang

Titles in Statistics from SIAM

Nonparametric Function Estimation, Modeling, and Simulation
James R. Thompson and Richard A. Tapia

Emphasizes nonparametric density estimation as an exploratory device plus the deeper models to which the exploratory analysis points, multi-dimensional data analysis, and analysis of remote sensing data, cancer progression, chaos theory, epidemiological modeling, and parallel based algorithms, among other topics. New methods discussed are quick nonparametric density estimation based techniques for resampling and simulation based estimation techniques not requiring closed form solutions.

Professionals in statistics, computer science, and operations research will find this book useful, as will graduate students in the areas of statistics, engineering, data analysis and modeling, and density estimation. Engineers in all fields—particularly biomedicine—will be interested in this book and should find its contents quite applicable.

Contents. Chapter 1: Historical Background; Chapter 2: Some Approaches to Nonparametric Density Estimation; Chapter 3: Maximum Likelihood Density Estimation; Chapter 4: Maximum Penalized Likelihood Density Estimation; Chapter 5: Discrete Maximum Penalized Likelihood Estimation; Chapter 6: Nonparametric Density of Estimation in Higher Dimensions; Chapter 7: Nonparametric Regression and Intensity Function Estimation; Chapter 8: Model Building and Speculative Data Analysis; Appendix I: An Introduction to Mathematical Optimization Theory; Appendix II: Numerical Solution of Constrained Optimization Problems; Appendix III: Optimization Algorithms for Noisy Problems; Appendix IV: A Brief Primer in Simulation; Index.

Spline Models for Observational Data
Grace Wahba

"This is a thorough account of non-parametric regression using splines, eschewing other approaches, and approaching splines themselves via the technology of reproducing kernel Hilbert spaces. The result is an impressively unified, consistent, treatment of a wide variety of problems, some really quite hard...This is an impressive record of research, offering stimulation for further investigation."

—P.J. Green, University of Bristol, Short Book Reviews, Publication of the International Statistical Institute, December 1990.

This book serves well as an introduction into the more theoretical aspects of the use of spline models. It develops a theory and practice for the estimation of functions from noisy data on functionals. The simplest example is the estimation of a smooth curve, given noisy observations on a finite number of its values.

Contents. Foreword; Chapter 1: Background; Chapter 2: More Splines; Chapter 3: Equivalence and Perpendicularity, or, What's So Special About Splines?; Chapter 4: Estimating the Smoothing Parameter; Chapter 5: "Confidence Intervals"; Chapter 6: Partial Spline Models; Chapter 7: Finite-Dimensional Approximating Subspaces; Chapter 8: Fredholm Integral Equations of the First Kind; Chapter 9: Further Nonlinear Generalizations; Chapter 10: Additive and Interaction Splines; Chapter 11: Numerical Methods; Chapter 12: Special Topics; Bibliography; Author Index.

The Total Least Squares Problem: Computational Aspects and Analysis
Sabine Van Huffel and Joos Vandewalle

"...TLS (Total Least Squares) represents a technique that synthesizes statistical and numerical methodologies for solving problems arising in many application areas. The authors of this monograph have been leaders in showing how to use TLS for solving a variety of problems, especially those arising in a signal processing context. They give an elegant presentation of the various aspects of the TLS problem. Their survey encompasses the many elements required to understand the problem. It is a pleasure to read such a clear account, which is presented using standard mathematical ideas and nomenclature."

—Gene H. Golub, Department of Computer Science, Stanford University

Contents. Introduction; Basic Principles of the Total Least Squares Problem; Extensions of the Basic Total Least Squares Problem; Direct Speed Improvement of the Total Least Squares Computations; Iterative Speed Improvement for Solving Slowly Varying Total Least Squares Problems; Algebraic Connections Between Total Least Squares and Least Squares Problems; Sensitivity Analysis of Total Least Squares and Least Squares Problems in the Presence of Errors in all Data; Statistical Properties of the Total Least Squares Problem; Algebraic Connections Between Total Least Squares Estimation and Classical Linear Regression in Multicollinearity Problems; Conclusions.

In a perfect world, all your data would be normally distributed, like this:

In the real world, normal distributions rarely occur for sparse, imbalanced or small data sets. And, only StatXact can tell you when your test statistic is multimodal, like this:

Get StatXact. Your data were expensive to gather. Don’t they deserve the most accurate analysis current technology can provide? Call us today.

StatXact Features:

Exact One-Sample Procedures
- Binomial confidence interval
- Wilcoxon signed rank test
- Permutation test with general scores
- Exact permutational distributions

Exact Stratified 2 x 2 Contingency Tables
- Tests of homogeneity for odds ratios
- Tests of unity for the common odds ratio
- Confidence interval for common odds ratio

Exact Stratified 2 x C Contingency Tables
- All two-sample tests with stratification
- Confidence interval for trend parameter
- Exact permutational distributions

Exact Two-Sample Procedures
- Wilcoxon-Mann-Whitney test
- Normal scores test
- Savage test
- Logrank test for censored survival data
- Gehan test for censored survival data
- Cochran-Armitage trend test
- Permutation test with general scores
- Exact permutational distributions

Individual and Organizational Memberships. All individual members pay basic membership dues of $40 plus $10 for The IMS Bulletin. Each regular member must elect to receive at least one scientific journal for an additional amount, as follows: The Annals of Applied Probability ($10), The Annals of Probability ($20), The Annals of Statistics ($20) or Statistical Science ($10). Of the total dues paid, $24 is allocated to The IMS Bulletin and the remaining amount is allocated equally among the scientific journal(s) received. Reduced membership dues are available to full-time students, permanent residents of countries designated by the IMS Council and retired members. Retired members may elect to receive The IMS Bulletin only for $20. Organizational memberships are available to nonprofit organizations at $425 per year and to for-profit organizations at $700 per year. Organizational memberships include two multiple-reader copies of all IMS journals in addition to other benefits specified for each category (details available from the IMS Business Office).

Individual and General Subscriptions. Subscriptions are available on a calendar-year basis. Individual subscriptions are for the personal use of the subscriber and must be in the name of, paid directly by, and mailed to an individual. Individual subscriptions for 1992 are available to The Annals of Applied Probability ($70), The Annals of Probability ($70), The Annals of Statistics ($80), The IMS Bulletin ($45) and Statistical Science ($70). General subscriptions are for libraries, institutions, and any multiple-reader use. General subscriptions for 1992 are available for The Annals of Applied Probability ($80), The Annals of Probability and The Annals of Applied Probability ($80), The Annals of Statistics ($130), The IMS Bulletin ($50) and Statistical Science ($75). Air mail rates for delivery outside North America are $80 per title (excluding The IMS Bulletin).

Permissions policy. Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Institute of Mathematical Statistics, provided that the base fee of $7.50 per copy, plus $0.00 per page is paid directly to the Copyright Clearance Center, 27 Congress Street, Salem, Massachusetts 01970. For those organizations that have been granted a photocopy license by CCC, a separate system of payment has been arranged. The fee code for users of the Transactional Reporting Service is 0883-4237/92 $7.50 + .00.

Correspondence. Mail to IMS should be sent to the IMS Business Office (membership, subscriptions, claims, copyright permissions, advertising, back issues), the Editor of the appropriate journal (submissions, editorial content) or the Production Editor, Patrick Kelly, Department of Statistics, University of Pennsylvania, Philadelphia, Pennsylvania 19104-6302.
M.A. Berger, Georgia Institute of Technology, Atlanta, GA

An Introduction to Probability and Stochastic Processes

This textbook provides students with a straightforward introduction to the mathematical theory of probability. It presents the central results and techniques of the subject in a complete and self-contained account. As a result, the emphasis is on giving results in simple forms with clear proofs and to eschew more powerful forms of theorems which require technically involved proofs. Any student who has a familiarity with calculus and basic algebra will be able to use this text. Throughout there are a wide variety of exercises to illustrate and develop ideas in the text. One highlight of the book is an account of random iterated function systems.

Springer Texts in Statistics

Model Assisted Survey Sampling

Features the model assisted approach to estimation stressing important general principles for estimation and analysis in surveys. Covers some basic material: survey operations and standard survey methods but also includes more advanced material: use of modelling in sampling, stating the precision in survey estimates, use of supplementary information (from census or administrative files, nonresponse and missing data, survey errors and error models, and estimation for subpopulations and small areas). Includes real data sets for exercises in an appendix. The book is intended for statistics students, survey methodologists and those engaged in survey research in a variety of disciplines.

P. Todorovic, University of California, Santa Barbara, CA

An Introduction to Stochastic Processes and Their Applications

Presents an introduction to the theory of continuous parameter stochastic processes at the graduate-level. It is designed to provide a systematic account of the basic concepts and methods from a modern point of view and emphasizes the study of the sample paths of the processes. In addition to six principal classes of stochastic processes (independent increments, stationary, strictly stationary, second order processes, Markov processes and discrete parameter martingales) there are also separate chapters on point processes, Brownian motion processes and \(L_\infty\) spaces. Numerous examples and applications are presented and over 200 exercises are included to illustrate and explain the concepts discussed in the text.
