THEORETICAL POPULATION BIOLOGY

An International Journal

edited by J. F. CROW, Department of Genetics, University of Wisconsin, Madison, Wisconsin, **S. KARLIN,** Department of Mathematics, Stanford University, Stanford, California, **N. KEYFITZ,** Department of Demography, University of California, Berkeley, California, and **R. MAC ARTHUR,** Department of Biology, Princeton University, Princeton, New Jersey

Managing Editor: J. McGREGOR, Department of Mathematics, Stanford University, Stanford, California

This new interdisciplinary journal publishes papers on the theoretical aspects of the biology of populations, especially in the areas of ecology, genetics, demography and epidemiology. The main emphasis is on developments of the theory but experimental results directly impinging on the theory may be accepted for publication. The subject of population biology is one of increasing interest and concern in these times of rapid change and evolving environments. A central source of information, this journal is a must for researchers in the field, from the genetic level to the demographic level.

Volume 1: 1970, (3 issues) $16.00
(Add $1.60 for postage outside U.S.A. and Canada)

Personal Subscription: $10.00

Personal Subscriptions are available on orders placed directly with the Publishers certifying the subscription is paid for by the subscriber for his personal use.

A LIMITED NUMBER OF SAMPLE COPIES ARE AVAILABLE ON REQUEST.

SUBMISSION OF PAPERS: Intending contributors are asked to submit papers for inclusion to any one of the Editors.

PRIORITY QUEUES

by N. K. JAISWAL, Operations Research Group, Case Institute of Technology, Cleveland, Ohio

This book provides a comprehensive and up-to-date exposition of congestion systems under various priority disciplines. A unified approach to the study of exogenous priority disciplines is presented and several endogenous priority disciplines are discussed. The stochastic behavior of such processes is investigated by using the supplementary variable technique and by setting the differential-difference equations. The first work to cover thoroughly this aspect of congestion theory, it will be indispensable to all those interested in theory of queues, stochastic processes, system engineering, and general operations research. The book will also be of use to graduate students. Knowledge of renewal theory and elementary queuing theory is presumed.

1968, 240 pp., $12.00

CLASSICAL AND MODERN INTEGRATION THEORIES

by IVAN N. PESIN, L'vov State University, L'vov, USSR
Translated from the Russian and edited by SAMUEL KOTZ, Temple University

This monograph presents a detailed historical survey of the development of classical integration theory from Cauchy to Daniell and includes a review of the more recent models. Using unified notation throughout, the author gives almost direct quotations of basic definitions and theorems from original papers and treatises and follows these with commentaries and analyses of the concepts and arguments introduced. Thus, he emphasizes their relationship to previous (and in some cases, future) theories, and compares the relative merits and features of various developments. This format results in a vivid, readable account of integration theory that places the ideas of the classical authors in the perspective of modern mathematics.

October 1970, about 200 pp., $12.50

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars; technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published; moreover, a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in each issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

Annual Subscription	£7. 10s. (U.S.A. $24.00)
Single Number	£2. 5s. (U.S.A. $ 7.00)
Loose Leaf Binders for Single Abstract Sheets	16s. 3d. including postage and packing.

BIOMETRICS

Journal of the Biometric Society

Vol. 26, No. 4 **CONTENTS** **December 1970**

The choice and use of tests for the independence of two sets of variates.. ... ...*J. S. Williams*
Selection index estimation from partial multivariate normal data . *W. B. Smith and R. C. Pfaffenberger*
Calculation of the expected mean squares by the abbreviated Doolittle and square root methods
D. W. Gaylor, H. L. Lucas, and R. L. Anderson
A comparison of variances of some estimators in the balanced incomplete block (BIB) variance components model... ... ...

JOURNAL OF THE AMERICAN STATISTICAL ASSOCIATION

Volume 65 September 1970 Number 331

Applications

Canadian Job Vacancy Survey: A Measure of Labor Demand... ....*Sylvia Ostry and Alan Sunter*
Balanced Repeated Replications for Standard Errors..... ....*Leslie Kish and Martin Frankel*
Variability of Treatments and Experimental Units in the Design and Analysis of Experiments *Sidney Addelman*
Piecewise Regression..... ....*Victor E. McGee and Willard T. Carleton*
Age Distribution of Deaths from Smoking..... . ...*Samuel H. Preston*
Predictive Accuracy of Quarterly and Annual Aggregate Saving Functions..... *George Craig*
Measurement of Citrus Demand When All Variables Are Subject to Error..... . .....*Anthony A. Prato*
A Direct Test of Friedman's Permanent Income Theory.....*James M. Holmes*
Time Series Method for Testing a Model of the Term Structure of Interest Rates.....*Charles R. Nelson*
Capital Appropriations and Investment Behavior.....*Sungwoo Kim*
On Measuring Geographic Mobility..... ....*Larry H. Long*
A Test Procedure for the Simulated Plant-Record Method. ....*R. E. White and H. A. Cowles*

Theory and Methods

The Cube Law Revisited.. . ...*Henri Theil*
Zipf's Law and Prior Distributions for the Composition of a Population..... ....*Bruce M. Hill*
Calibration and Statistical Inference.....,.. ....*D. F. Andrews*
Some Probability Inequalities of Multivariate Normal and Multivariate *t*.. .....*Yung Liang Tong*
Sufficiency and Exponential Families for Discrete Sample Spaces..... . .....*Erling Bernhard Andersen*
The Characterizations for Exponential and Geometric Distributions.... . ...*D. N. Shanbhag*
Inadmissibility of the Usual Scale Estimate for the Shifted Exponential Distribution..... *Barry C. Arnold*
Asymptotically Robust Estimators of Location..... . ...*Allan Birnbaum and Valerie Mike*
On Nonparametric Estimation and Testing for Interactions in Factorial Experiments *K. L. Mehra and G. E. J. Smith*
On the Nonparametric Tests of David and Fix with Bivariate Two-Sample Location Problem *J. G. Fryer*
Properties of a Rank Test of Cronholm and Revusky . . . . *G. K. Bhattacharyya and Richard A. Johnson*
A Test for a Shifting Slope Coefficient in a Linear Model .. . . . *John U. Farley and Melvin J. Hinich*
On the Efficiency of Ordinary Least Squares in Regression Models..... . ...*Pietro Balestra*
Systematic Biases in Panel Surveys Due to Differential Nonresponse . *W. H. Williams and C. L. Mallows*
A Double Sampling Scheme for Estimating from Binomial Data with Misclassifications *Aaron Tenenbein*
The Maximum-Likelihood Estimate for Contingency Tables with Zero Diagonal... ..... .*S. S. Wagner*
A Comparison of Minimum Logit Chi-Square Estimation and Maximum Likelihood Estimation in $2 \times 2 \times 2$ and $3 \times 2 \times 2$ Contingency Tables: Tests for Interaction..... ....*Charles L. Odoroff*
Hypothesis Testing Incorporating a Preliminary Test of Significance.....*Barry C. Arnold*
Inferential Procedures for the Generalized Gamma Distribution . . . . . *Harold W. Hager and Lee J. Bain*
An Optimum Test Property of Two Well-Known Statistics..... .....*Vincent A. Uthoff*
Small Sample Power of One-Sided Kolmogorov Tests for a Shift in Location of the Normal Distribution *M. Knott*
An Empirical Study of Estimators and Variance Estimators in Unequal Probability Sampling ($n = 3$ or 4) *D. L. Bayles and J. N. K. Rao*
On the Loss of Information in Combined Inter- and Intra-Block Estimation... ..... .*K. R. Shah*
Additional Factors for Calculating Prediction Intervals for Samples from a Normal Distribution *Gerald J. Hahn*

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

OFFICERS

President:

William Kruskal, Department of Statistics, University of Chicago, Chicago, Illinois 60637

President-Elect:

R. C. Bose, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

Executive Secretary:

Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan 48823

Program Secretary:

R. V. Hogg, Department of Statistics, University of Iowa, Iowa City, Iowa 52240

Treasurer:

George J. Resnikoff, Department of Statistics, California State College, Hayward, California 94542

Editor:

Ingram Olkin, Department of Statistics, Stanford University, Stanford, California 94305

Managing Editor:

K. J. C. Smith, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

Membership dues including a subscription to the ANNALS of MATHEMATICAL STATISTICS are $20.00 per year for residents of the United States or Canada and $12.00 per year for residents of other countries. Special student rates of $10.00 per year are available to students residing in the U. S. and Canada. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Membership in the Institute of Mathematical Statistics is not required of authors of papers in the *Annals of Mathematical Statistics* and the fact of membership or non-membership is given no weight in the consideration of submitted manuscripts.

(Instructions for authors—*continued*)

Authors are asked to keep in mind the typographical difficulties and high cost of printing complicated mathematical formulas. The difference between capital and lower-case letters should be clearly shown; care should be taken to avoid confusion between such pairs as zero and the letter O, the numeral 1 and the letter l, numeral 1 used as superscript and prime ($'$), alpha and a, kappa and k, mu and u, nu and v, eta and n, etc. Bars above groups of letters (e.g., $\overline{\log x}$) and underlined letters (e.g., $\underline{x}$) are difficult to print and should be avoided; lim inf and lim sup are preferable to $\underline{\lim}$ and $\overline{\lim}$. Symbols are automatically italicized by the printer and should not be underlined on manuscripts. Boldface letters may be indicated by underlining with a wavy line on the manuscript; boldface subscripts and superscripts are not available. Unusual accents on letters should be avoided or replaced by superscripts or subscripts. Complicated exponentials should be represented with the symbol exp. In writing square roots the fractional exponent is preferable to the radical sign. Fractions are preferably written with the solidus or negative exponent; thus $(a + b)/(c + d)$ rather than $\frac{a + b}{c + d}$, and $(2\pi)^{-1}$ rather than $\frac{1}{2\pi}$. In addition to decreasing the printing costs, a simple notation greatly improves the readability and appearance of a manuscript.

Authors will ordinarily receive only galley proofs. Fifty reprints without covers will be furnished free. Additional reprints and covers may be ordered at cost on forms which will be provided by the printer.

Contents (Continued)

Markov renewal processes with auxiliary paths.....MANFRED SCHAL 1604

Reciprocal processes: The stationary Gaussian case.....BENTON JAMISON 1624

An operator theorem on L_1 convergence to zero, with applications to Markov kernels
DONALD ORNSTEIN AND LOUIS SUCHESTON 1631

Some robust selection procedures.....RONALD H. RANDLES 1640

Bounds for the power of likelihood ratio tests and their asymptotic properties
OLAF KRAFFT AND DETLEF PLACHKY 1646

The sequential generation of D-optimum experimental designs.....HENRY P. WYNN 1655

On choosing a Delta-sequence.....MICHAEL WOODROOFE 1665

Some remarks on the Feller property.....JOHN B. WALSH 1672

A class of orthogonal series related to martingales.....PAUL I. NELSON 1684

On a theorem of Bahadur on the rate of convergence of test statistics
M. RAGHAVACHARI 1695

An asymptotic expansion for the non-central Wishart distribution
GEORGE A. ANDERSON 1700

The application of invariance to unbiased estimation
MORRIS L. EATON AND CARL N. MORRIS 1708

On the effect of a search upon the probability distribution of a target whose motion is a diffusion process.....OLAVI HELLMAN 1717

Linear spaces and unbiased estimation.....JUSTUS SEELY 1725

Linear spaces and unbiased estimation—application to the mixed linear model
JUSTUS SEELY 1735

Notes

Multiplication of polykays using ordered partitions.....E. J. CARNEY 1749

A central limit theorem with nonparametric applications..GOTTFRIED E. NOETHER 1753

A note on a sequential procedure for comparing two Koopman—Darmois populations.....EDWARD PAULSON 1756

A comment on the compound decision theory.....ELSE SANDVED 1760

Generalized combining of elements from finite fields.....B. L. RAKTOE 1763

Some convergence theorems for ranks and weighted empirical cumulatives
HIRA LAL KOUL 1768

Finite population sampling—on labels in estimation.....RICHARD M. ROYALL 1774

Book Review.....A. HEDAYAT 1780

Abstracts..... 1783

News and Notices..... 1810

Publications Received..... 1815

CHANGE OF EDITOR. Manuscripts should be submitted to the new Editor, Ingram Olkin, Department of Statistics, Stanford University, Stanford, California 94305. Correspondence about manuscripts submitted before July 1, 1970, should be directed to Z. W. Birnbaum, Department of Mathematics, University of Washington, Seattle, Washington 98105.
